Pearson's Commitment to Diversity, Equity and Inclusion

Pearson is dedicated to creating bias-free content that reflects the diversity, depth and breadth of all learners' lived experiences. We embrace the many dimensions of diversity including, but not limited to, race, ethnicity, gender, sex, sexual orientation, socioeconomic status, ability, age and religious or political beliefs.

Education is a powerful force for equity and change in our world. It has the potential to deliver opportunities that improve lives and enable economic mobility. As we work with authors to create content for every product and service, we acknowledge our responsibility to demonstrate inclusivity and incorporate diverse scholarship so that everyone can achieve their potential through learning. As the world's leading learning company, we have a duty to help drive change and live up to our purpose to help more people create a better life for themselves and to create a better world.

Our ambition is to purposefully contribute to a world where:

- Everyone has an equitable and lifelong opportunity to succeed through learning.
- Our educational products and services are inclusive and represent the rich diversity of learners.
- Our educational content accurately reflects the histories and lived experiences of the learners we serve.
- Our educational content prompts deeper discussions with students and motivates them to expand their own learning and worldview.

We are also committed to providing products that are fully accessible to all learners. As per Pearson's guidelines for accessible educational Web media, we test and retest the capabilities of our products against the highest standards for every release, following the WCAG guidelines in developing new products for copyright year 2022 and beyond. You can learn more about Pearson's commitment to accessibility at:

- gender neutral language and engaging, accessible writing style

“Based upon this brief discussion we can already see that research has several characteristics:

- The purpose, to find out things, is stated clearly.
- The data are collected systematically.
- The data are interpreted systematically.

We can therefore define research as a process that is undertaken in a systematic way with a clear purpose, to find things out. Two phrases are important in this definition: ‘systematic way’ and ‘to find things out’. ‘Systematic way’ suggests that research is based on logical relationships and not just beliefs (Ghauri et al. 2020). As part of this, your research will involve an explanation of the method or methods used to collect the data, will argue...” (page 6)

Opening vignette - Decolonisation: beliefs assumptions and life-oppressing decisions

UNIVERSITY OF
BIRMINGHAM

“Our own beliefs and assumptions about how the world operates affect both the data we gather and how we interpret that data. For countries that have been colonised, this is evident in the dominance of settlers’ views over those of the indigenous peoples and the need for remedy through decolonisation. Modern Australia, for example, was founded on western, colonial systems that did not include Indigenous First Nation Australians’ knowledges, cultures, rights practices and laws, inflicting life-changing trauma on these peoples...” (page 129)

Case study - Female ride share app drivers' careers in Tehran

UNIVERSITY OF
BIRMINGHAM

“...Being concerned about my access to participants, I debated shifting the focus of my research from female to male taxi drivers, because my friends and family had introduced five male drivers to me. Yet, one of the key motivations for my research was that female app-based taxi drivers were a new phenomenon in an occupation dominated by males worldwide. It was the recent increase of female taxi drivers in a Muslim-dominant country that had inspired me to explore their career trajectory. Although Iranian women had been granted the right to drive for almost 80 years... (page 336)

Whistle while you work?

Using audio-visual documents to provide new insights into puzzles

In their 2017 *Organisation Studies* paper, Griffin and colleagues use secondary data to explore socio-cultural expectations about working that prepare young people for their future lives in organisations, a concept they term 'organizational readiness' (Griffin et al. 2017: 869). The secondary data for their research were the 54 animations considered by the Disney Corporation to be their best and most well-known animations, all of which were available in DVD format (now available via streaming services such as Disney⁺).

The tale of the Brexit referendum question

By David Allen Green

The referendum question was: ‘Should the United Kingdom remain a member of the European Union or leave the European Union?’ The question was originally planned to be: ‘Should the United Kingdom remain a member of the European Union?’ The Electoral Commission assessed the original question and decided: ‘We have previously recommended the possibility of either a yes/no question for use at a referendum on European Union membership. However, in this assessment we have heard clearer views, particularly from potential campaigners to leave the European Union, about their concerns regarding the proposed yes/no question. Our assessment suggests that it is possible to ask a question which would not cause concerns about neutrality, while also being easily understood.’ The commission thereby recommended the wording used, and this was accepted by government and parliament.

Research had indicated there could be a difference. ‘It seemed to reveal there was 4 per cent in what the question was, whether it was a “yes/no” question or a “remain/leave” question.’

Advice on writing

“Finally, you should try to avoid language that assumes the gender of a classification of people. The most obvious example of these is the constant reference to managers as ‘he’. This is inaccurate in organisations and gives offence to many people. Those offended will probably include your readers! It is simple enough to avoid (e.g. ‘I propose to interview each executive unless he refuses’ becomes ‘I propose to interview each executive unless I receive a refusal’) but often less easy to spot...

Appendix 3 gives more detailed guidance on the use of non-discriminatory language, including the use of non-binary (gender-neutral) pronouns...”
(page 749)

Appendices

“Writing in a non-discriminatory manner is essential in all areas of business and management. The growth of the Black

Appendix 3 Guidelines for non-discriminatory language*

Lives Matter into a global movement has emphasised the inherent white supremacy in much of society including its organisations (Black Lives Matter nd)...

The task of ensuring that the language you use is non-discriminatory may at first seem difficult. However, it is crucial that you do so...” (page 807)

Recycling bins with a difference

Pearson

Transcript

Recycling bins with a difference

This bin in the city of London seems like a simple place to put your rubbish. However, until recently, this bin, and 200 like it owned by the company Renew, didn't just collect your unwanted bottles and packets, but something companies find much more valuable, your personal data.

Whenever someone walked buy one of their bins with the WiFi on their smartphone enabled, the bin was able to pick up the so-called MAC address, which is the unique identifier of the device, and which UK regulators classify as a bit of personal information.

The company, which also owns bins in New York and Singapore, said it was collecting the data for a trial which is now stopped. But it has become a symbol of the battle between companies' seemingly inexhaustible appetite for information about their consumers and people worried about protecting their privacy.

Critical review structure

Although there is no single structure that your critical review should take, our students have found it useful to think of the review as a funnel in which you:

Critical review structure

The description reads as follows: Although there is no single structure that your critical review should take, our students have found it useful to think of the review as a funnel in which you:

A text next to the portion labelled 1 reads: Start at a more general level before narrowing down to your specific research question(s) and objectives.

A text next to the portion labelled 2 reads: Provide a brief overview of key ideas and themes.

A text next to the portion labelled 3 reads: summarise, compare, and contrast the research of the key authors.

A text next to the portion labelled 4 reads: Narrow down to highlight previous research work most relevant to your own research.

Diverse imagery and perspectives

Teaching decolonisation as part of research philosophy

UNIVERSITY OF
BIRMINGHAM

The vignette and subsequent commentary:

- ❑ introduce specific assumptions made by researchers (colonial settlers) about what is being researched (of First Nations Australians).
- ❑ reveal how researchers' assumptions shape the way the research topic is seen and the data that are collected and subsequently reported
- ❑ surface implications of researchers' values and ethics on the research process

Just as colonialists' beliefs and assumptions affected how they interpreted what they saw in Australia and other colonised lands, our own belief systems and associated taken-for-granted assumptions can impact on our interpretations in the research we pursue

Play a YouTube video: 'tell the other side'

UNIVERSITY OF
BIRMINGHAM

Gather 'round, people, and I'll tell you a story
Two hundred years of history that's falsified
British invaders that we remember as heroes
Are you ready to tell the other side?
We start our story in 1493
With a piece of paper called the Doctrine of Discovery
Invoked by Pope Alexander VI
Without this good Christian, our story don't exist
From little things, big things grow
From little things, big things grow
Captain James Cook, he boarded a fleet
And he was armed with the Doctrine of Discovery
The same tactics were used by Columbus
It's how today Australia claims Terra Nullius
Cause on that paper, the Pope did write
That you're only human if you've been saved by Christ
And if there are no Christians in sight
The land you stumble on becomes your God given right

Use the vignette to recognise and critique researchers' beliefs and assumptions about...

- ❑ the nature of reality (ontology),
- ❑ what constitutes legitimate data (epistemology),
- ❑ how their values affect both the data gathered and are subsequently interpreted and reported (axiology)

- ❑ How do a researcher's assumptions affect the data that are gathered and how these data are interpreted?

- ❑ Explore through dominant narrative of colonial settlers and contrast with that of the indigenous peoples in Australia

The dominant narrative

UNIVERSITY OF
BIRMINGHAM

Aboriginal peoples were:

- Hunter gatherers
- Heathens
- ...with no existing economy

European colonialists were:

- Superior in science, technology and religion
- Spreading the word of (their) God *in return for* wealth of the colonised lands

BIRMINGHAM
BUSINESS
SCHOOL

An alternative narrative

Aboriginal peoples:

- ❑ Cultivated and irrigated crops living in villages
- ❑ Were sophisticated in their food production and land management systems

European colonialists:

- ❑ Did not understand how to manage the fragile ecosystem
- ❑ Made no treaties and stole the land (sovereignty was never ceded)

Stock image

An example: the Murray River System

UNIVERSITY OF
BIRMINGHAM

- ❑ Pascoe (2018) reinterprets a variety of data including records, diaries and published narratives by the first European colonialists.
- ❑ Colonialist James Kirby observed a series of weirs built in what is now known as the Murray River system revealing how these weirs were used to direct and support catching of fish. Yet, Kirby (1897) subsequently interpreted what he had seen as “indolence” and “laziness”.

Relating to philosophical assumptions in research

- ❑ **Ontology:** Colonialists assumed First Nation Australians were hunter gatherers and lazy viewing what they saw through this lens

- ❑ **Epistemology:** Colonialists considered only certain types of knowledge as legitimate:
 - numerical, textual, visual, ‘facts’
 - ‘narratives, stories’

- ❑ **Axiology:** Colonialists felt it was their ‘duty’ to:
 - spread their version of civilisation
 - Spread the word of (their) God to heathens
 - *Terra Nullius* –land is your God given right if no Christians in sight...
