Women in Tech

Fei-Fei Li

July 3, 1976 – Present

The pioneer bringing humanity to Artificial Intelligence!

Fei-Fei Li is a computer science professor at Stanford University and co-director of its Human-Centred AI Institute. She is famous for her work in artificial intelligence and how computers understand images, a field called computer vision. Fei-Fei created ImageNet, a huge library of images that taught computers to recognise and sort pictures with amazing accuracy, changing how AI works forever.

She is also a passionate teacher, inspiring young scientists and engineers while promoting diversity and fairness in technology. Fei-Fei's career shows how curiosity, hard work, and teamwork can help anyone shape the future of tech and make a real difference.

Do you...

- Like experimenting with new concepts?
You are innovative!
- Enjoy organising social events with your friends?
You have teamwork and planning skills!
- Love solving the case in a true crime documentary?
You have problem-solving skills!

You could be the future of computing, like Fei-Fei Li!
