

Pearson Peer to Peer Nursing

TRANSCRIPT

Before a nursing student can master a skill they have to practice it. But rote memorization of skills isn't enough. With Clinical Nursing Skills, Practice for Mastery delivered through Pearson's MyLab Nursing, students can go further, transforming their everyday practice into a complete learning experience that promotes mastery over memorization.

This is possible thanks to an easy-to-use peer to peer evaluation process built into Pearson's Digital Skills Lab. Here's how the process works.

A nursing student video records themselves demonstrating a skill they need to learn for their competencies check-off. Then the student uploads the video through the peer-to-peer assignment within MyLab Nursing, which is easy to do.

Not only is the interface simple, but all major video formats work. Students can even link to YouTube if they prefer to archive videos there.

Once the video is uploaded, a student peer evaluates the skills performance based on a built-in skills checklist and rubric.

The feedback provide students with valuable insight.

Plus, the videos allow instructors to monitor student progress or use the completion of the practice as a pre-class requirement.

Studies show that when students learn from each other, they learn better. The peer-to-peer evaluation process delivered through Pearson's MyLab Nursing ensures that students receive valuable feedback on a skill before instructor assessment, helping make teaching more successful and students better prepared for their vital role in nursing.
