

Do you know Revel?

Psychology

There it is. And there. And there.

When your student lights up because they just got it. You watch it in real time, and you can't get enough of it. Let's make it happen more often.

Enter Revel. A digital learning platform that makes your students feel the connection between their classroom and the world.

Revel doesn't just bring learning to life; it brings real life to learning. Students learn best when they engage with your course's concepts in meaningful ways.

Interactive features and exercises, like the ones in Revel Psychology, let them do just that.

Videos illuminate topics and processes that can be hard to comprehend, while corresponding Exercises promote active learning with case studies, interviews, and more.

The **On Diagnosis** video series lets students view first-hand accounts of people living with a specific psychological disorder. Each video ends with a discussion of the disorder as it relates to DSM-5TR criteria.

Adaptive Pathways assessments help students stay on track by identifying and correcting their misconceptions in real time.

MyVirtualChild and **MyVirtualLife** allow students taking Revel Developmental Psychology courses to see how their parenting decisions and life choices can combine with environmental and genetic factors to shape the development of virtual characters.

Interactive simulations and experiments help students connect psychological concepts and theories to their own lives.

Revel inspires and empowers students to apply their learning, not just in your course, but in their lives today, and their future careers.
