Grade PreK-6

Recent research tells us that one of the keys to student success is self-regulation – the ability to monitor and modify emotions, to focus or shift attention, to control impulses, to tolerate frustration or delay gratification. But can a child's ability to self-regulate be improved? Canada's leading expert on self-regulation, **Dr. Stuart Shanker**, knows it can and that, as educators, we have an important role to play in helping students' develop this crucial ability. Distinguished Research Professor at York University and Past President of the Council for Early Child Development, Dr. Shanker leads us through an exploration of the five major domains—what they are, how they work, what they look like in the classroom, and what we can do to help students strengthen in that domain.

When people want to learn how to make self-regulation a part of their teaching practice they often ask one question: How? This title answers that question by detailing how four models, or streams, of self-regulation environments develop in our classrooms and schools. Each stream is outlined with practical tools and strategies you can use to enhance your classroom so that it reflects and embodies the theory and practice of self-regulation for the benefit of all—you, your students, parents, and the community at large. *Where Calm, Alert and Learning* answered the what and why of self-regulation, this handbook answers that all-important question of how to do it and, more importantly, gives you the tools you need to make it happen! Each School Leader's Package includes a copy of the Self-Reg handbook and access to an online principal's resource. Here you'll find rubrics you can use to help shape growth, executive summaries to support your learning, bookclub suggestions to guide staff exploration of the book, actionable tips to support your staff, and implementation ideas for self-reg tools.

Grade 3-9

Eight core concepts form a trajectory of learning that moves generally from foundational to more complex ideas. The trajectory is designed to help students form strong schemas and mental representations of fractions, allowing them to work with increasingly difficult fractions ideas with understanding. Core Concepts 1 to 4 lay a strong foundation for understanding fractions, while Core Concepts 5 to 8 allow students to apply this understanding to more complex thinking about fractions. Although the core concepts move in a direction of increasing complexity, they do not act as a linear prescription for learning. Rather, relationships across the core concepts allow us, as educators, to identify students' needs and support their learning by moving among concepts.

*Access for Success: Making Inclusion Work for Language Learners* is the first educational text of its kind to integrate principles and theories about Universal Design for Learning and language learning with practical strategies to address the diverse needs of today's language learners in Canada. Drs. Katy Arnett and Renée Bourgoin accomplish this by establishing four Access Points or steps to inclusive language education:

1. Knowledge *IS* access.
2. Know your language learners. Empower them.
3. Universal language actions and differentiation that support comprehension, production, attention, and overall language development.
4. Make informative decisions regarding assessment and protocols to facilitate inclusion.

The authors' strategies are backed by sound research and years of in-class, hands-on experience. *Access for Success* is a comprehensive resource that can be used by all second-language teachers who seek to make inclusion part of their classrooms.

Connects biology to students' lives and our larger society. Authors reinforce concepts by fostering critical-thinking skills that help learners become informed citizens, relate classroom concepts to everyday life, and understand how biology's broader themes serve to unify the entire subject. 8e revises its treatment of the process of science, with a more nuanced approach that demystifies the subject for non-scientists and more authentically reflects how science is undertaken. It links content to major themes in biology, marking these connections clearly for easy identification. Many timely content updates and much more.
