

MediaShare in myab math makes it easy to deploy projects in your myab courses. Projects in applied calculus and finite math are assignable from the myab assignment manager. Projects are pre-built with engaging problem prompts that can include video and animations powered by geogebra.

You as the instructor can choose the media that students can submit for a grade. This is a great opportunity to give students the chance to explain their problem solving steps in a short video. You can also turn on peer review and group work from the assignment manager.

Once assigned students simply view the media provided and then download a problem walkthrough that guides them through the project. After students complete their work they will upload their finished project and this is when they can also submit a recorded explanation if you choose.

Projects in Media Share come with editable rubrics that you can use to efficiently grade and give feedback all of this goes to your myab gradebook and LMS Gradebook if you choose to sync your course.
