

TEAS and HESI practice questions help students get ready for their nursing school entrance exams while in the anatomy and physiology one and two courses. As students work through the varying categories of multiple-choice questions like english, math, science, and reading comprehension, students receive right and wrong answer feedback for all questions in the moment, ensuring the student understands the reasoning behind the correct answer. Students can practice the questions over and over as many times as they'd like. To learn more about Pearson's TEAS and HESI practice questions, visit the Mastering A&P homepage.
