

Fifty-Fifty Book 2: Unit 9 Worksheet (B)

DELIVERY MIX UP

A furniture shop has delivered six orders to six apartments in an apartment building. However, the orders were delivered to the wrong apartments. Read the clues below to complete the table and find out which apartment each order should be redelivered to.

There are six apartments in the three-storey apartment building: apartments 101, 102, 201, 202, 301 and 302. One person lives in each apartment. There are only three men. Sharon lives in apartment 301. A man lives next door, and a woman lives directly below her. Guido ordered a firm bed, but one of the women ordered a firmer bed. Both beds should have been delivered to apartments on the third floor. Noah lives in an apartment on the first floor. Beth ordered a bookcase that is smaller than Noah's, but larger than Luigi's. The woman in apartment 101 ordered a dining set, but the firmer of the two beds was delivered instead. The person next door ordered a bookcase, but it is now in Luigi's apartment. Beth lives in apartment 201, which is next door to Luigi and above Judy. The bookcase that was delivered to Noah's apartment is smaller than the one he ordered, but it is bigger than the one delivered to Beth's apartment. Guido already has a kitchen table and chairs, so he wants to find out who he needs to give the newly delivered dining set to.

Building		Furniture		Correct Apartment
Apartment	Tenant	Ordered	Delivered	
101				
	Noah			
		medium-size bookcase		
				102
	Sharon			
302		firm bed
