

**Correlation of Prince Edward Island Program of Studies with Mathology  
Grade 6  
(Number)**

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Develop number sense.		
<p><b>Specific Curriculum Outcomes</b> N1: Demonstrate an understanding of place value for numbers:</p> <ul style="list-style-type: none"> <li>• greater than one million</li> <li>• less than one thousandth.</li> </ul>	<p><b>Number Unit 1: Number Relationships and Place Value</b> 1: Representing Larger Numbers (to 1 000 000 and Beyond) 2: Representing Numbers in Different Forms 5: Consolidation of Number Relationships and Place Value</p> <p><b>Number Unit 3: Fractions, Decimals, Percents, and Integers</b> 15: Representing Decimals 16: Comparing and Ordering Decimals 21: Consolidation of Fractions, Decimals, Percents and Integers</p>	<p><b>Big Idea: The set of real numbers is infinite.</b> <b>Extending whole number understanding to the set of real numbers</b> - Extends whole number understanding to 1 000 000. - Extends decimal number understanding to thousandths. <b>Big Idea: Numbers are related in many ways.</b> <b>Comparing and ordering quantities (multitude or magnitude)</b> - Compares, orders, and locates whole numbers based on place-value understanding, and records using &lt;, =, and &gt; symbols. - Compares, orders, and locates decimal numbers using place-value understanding. <b>Decomposing and composing numbers to investigate equivalencies</b> - Composes and decomposes whole numbers using standard and non-standard partitioning (e.g., 1000 is 10 hundreds or 100 tens). - Composes and decomposes decimal numbers using standard and non-standard partitioning (e.g., 1.6 is 16 tenths or 0.16 tens ). <b>Big Idea: Quantities and numbers can be grouped by or partitioned into equal-sized units.</b> <b>Unitizing quantities into base-ten units</b></p>

		<ul style="list-style-type: none"> <li>- Writes and reads whole numbers in multiple forms (e.g., 1358; one thousand three hundred fifty-eight; <math>1000 + 300 + 50 + 8</math>).</li> <li>- Understands that the value of a digit is ten times the value of the same digit one place to the right.</li> <li>- Understands that the value of a digit is one-tenth the value of the same digit one place to the left.</li> <li>- Writes and reads decimal numbers in multiple forms (e.g., numerals, number names, expanded form).</li> </ul>
N2: Solve problems involving large numbers, using technology.	<p><b>Number Unit 2: Fluency with Whole Numbers</b></p> <p>6: Solving Problems with Whole Numbers</p> <p>7: Estimating Reasonableness of Solutions</p> <p>9: Mental Math Strategies</p> <p>12: Consolidation of Fluency with Whole Numbers</p>	<p><b>Big Idea: Quantities and numbers can be operated on to determine how many and how much.</b></p> <p><b>Developing conceptual meaning of operations</b></p> <ul style="list-style-type: none"> <li>- Extends whole number computation models to larger numbers.</li> </ul> <p><b>Developing fluency of operations</b></p> <ul style="list-style-type: none"> <li>- Solves whole number computation using efficient strategies (e.g., mental computation, algorithms, calculating cost of transactions and change owing, saving money to make a purchase).</li> </ul>
<p>N3: Demonstrate an understanding of factors and multiples by:</p> <ul style="list-style-type: none"> <li>• determining multiples and factors of numbers less than 100</li> <li>• identifying prime and composite numbers</li> <li>• solving problems involving multiples.</li> </ul>	<p><b>Number Unit 1: Number Relationships and Place Value</b></p> <p>3: Identifying Factors and Multiples</p> <p>4: Identifying Prime and Composite Numbers</p> <p>5: Consolidation of Number Relationships and Place Value</p>	<p><b>Big Idea: Numbers are related in many ways.</b></p> <p><b>Decomposing and composing numbers to investigate equivalencies</b></p> <ul style="list-style-type: none"> <li>- Decomposes numbers into prime factors.</li> </ul> <p><b>Big Idea: Quantities and numbers can be operated on to determine how many and how much.</b></p> <p><b>Investigating number and arithmetic properties</b></p> <ul style="list-style-type: none"> <li>- Determines whether one number is a multiple of any one-digit number.</li> <li>- Examines and classifies whole numbers based on their properties (e.g., even/odd; prime; composite; divisible by 2, 5, and 10).</li> <li>- Generates multiples and factors for numbers using flexible strategies.</li> <li>- Distinguishes between and investigates properties of prime and composite numbers (e.g., prime factorization).</li> </ul> <p><b>Developing fluency of operations</b></p>

		- Fluently recalls multiplication and division facts to 100.
N4: Relate improper fractions to mixed numbers.	<b>Number Unit 3: Fractions, Decimals, Percents, and Integers</b> 13: Representing Fractions 14: Comparing and Ordering Fractions 21: Consolidation of Fractions, Decimals, Percents and Integers	<b>Big Idea: Numbers are related in many ways.</b> <b>Comparing and ordering quantities (multitude or magnitude)</b> - Compares, orders, and locates fractions using flexible strategies (e.g., comparing models; creating common denominators or numerators). <b>Estimating quantities and numbers</b> - Estimates the size and magnitude of fractions by comparing to benchmarks. <b>Decomposing and composing numbers to investigate equivalencies</b> - Models equivalent forms of improper fractions and mixed numbers using flexible strategies.
N5: Demonstrate an understanding of ratio, concretely, pictorially and symbolically.	<b>Number Unit 2: Fluency with Whole Numbers</b> 11: Exploring Ratios 12: Consolidation of Fluency with Whole Numbers	<b>Big Idea: Numbers are related in many ways.</b> <b>Using ratios, rates, proportions, and percents creates a relationship between quantities</b> - Understands the concept of ratio as a relationship between two quantities (e.g., 3 wins to 2 losses).
N6: Demonstrate an understanding of percent (limited to whole numbers), concretely, pictorially and symbolically.	<b>Number Unit 3: Fractions, Decimals, Percents, and Integers</b> 18: Relating Fractions, Decimals, and Percents 21: Consolidation of Fractions, Decimals, Percents and Integers	<b>Big Idea: Numbers are related in many ways.</b> <b>Decomposing and composing numbers to investigate equivalencies</b> - Models and explains the relationships among fractions, decimals, and percents. - Translates flexibly between representations.
N7: Demonstrate an understanding of integers, concretely, pictorially and symbolically.	<b>Number Unit 3: Fractions, Decimals, Percents, and Integers</b> 19: Representing Integers 20: Comparing and Ordering Integers 21: Consolidation of Fractions, Decimals, Percents and Integers	<b>Big Idea: The set of real numbers is infinite</b> <b>Extending whole number understanding to the set of real numbers</b> - Extends whole number understanding to negative numbers.
N8: Demonstrate an understanding of multiplication and division of decimals (1-digit whole number multipliers and 1-digit natural number divisors).	<b>Number Unit 4: Operations with Fractions and Decimals</b> 22: Multiplying Decimals by 1-Digit Numbers 24: Dividing Decimals by 1-Digit Numbers	<b>Big Idea: Quantities and numbers can be operated on to determine how many and how much.</b> <b>Developing conceptual meaning of operations</b> - Demonstrates an understanding of

	30: Consolidation of Operations with Fractions and Decimals	decimal number computation through modelling and flexible strategies. <b>Developing fluency of operations</b> - Solves decimal number computation using efficient strategies.
N9: Explain and apply the order of operations, excluding exponents, with and without technology (limited to whole numbers).	<b>Number Unit 2: Fluency with Whole Numbers</b> 8: The Order of Operations 12: Consolidation of Fluency with Whole Numbers	<b>Big Idea: Quantities and numbers can be operated on to determine how many and how much.</b> <b>Investigating number and arithmetic properties</b> - Applies order of operations for whole numbers and explains the effect when order is not followed.

## Correlation of Prince Edward Island Program of Studies with Mathology Grade 6 (Patterns and Relations: Patterns)

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Use patterns to describe the world and solve problems.		
<b>Specific Curriculum Outcomes</b> PR1: Demonstrate an understanding of the relationships within tables of values to solve problems.	<b>Patterning Unit 1: Patterning</b> 1: Investigating Patterns and Relationships in Tables and Graphs 2: Solving Problems 4: Consolidation of Patterning	<b>Big Idea: Regularity and repetition form patterns that can be generalized and predicted mathematically. Representing patterns, relations, and functions</b> - Represents a numeric or shape pattern using a table of values by pairing the term value with a term number. - Represents a mathematical context or problem with expressions and equations using variables to represent unknowns. <b>Generalizing and analyzing patterns, relations, and functions</b> - Explains the rule for numeric patterns including the starting point and change (e.g., given: 16, 22, 28, 34, .... Start at 16 and add 6 each time). - Describes numeric and shape patterns using words and numbers. - Predicts the value of a given element in a numeric or shape pattern using pattern rules. - Describes the relationship between two numeric patterns (e.g., for every 4 steps, she travels 3 metres).
PR2: Represent and describe patterns and relationships using graphs and tables.	<b>Patterning Unit 1: Patterning</b> 1: Investigating Patterns and Relationships in Tables and Graphs 2: Solving Problems 4: Consolidation of Patterning	<b>Big Idea: Regularity and repetition form patterns that can be generalized and predicted mathematically. Representing patterns, relations, and functions</b> - Represents a numeric or shape pattern using a table of values by pairing the term value with a term number. - Represents a mathematical context or problem with expressions and equations using variables to represent unknowns.

		<p><b>Generalizing and analyzing patterns, relations, and functions</b></p> <ul style="list-style-type: none"> <li>- Explains the rule for numeric patterns including the starting point and change (e.g., given: 16, 22, 28, 34, .... **Correlation of Prince Edward Island Program of Studies with Mathology  
Grade 6  
(Patterns and Relations: Variables and Equations)**

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Represent algebraic expressions in multiple ways.		
<b>Specific Curriculum Outcomes</b> PR3: Represent generalizations arising from number relationships using equations with letter variables.	<b>Patterning Unit 2: Variables and Equations</b> 7: Representing Generalizations in Patterns 10: Consolidation of Variables and Equations  <b>Measurement Unit 1A: Perimeter, Area, Volume, and Capacity</b> 1: Determining the Perimeter of Polygons 2: Determining the Area of Rectangles	<b>Big Idea: Patterns and relations can be represented with symbols, equations, and expressions.</b> <b>Using variables, algebraic expressions, and equations to represent mathematical relations</b> - Understands an unknown quantity (i.e., variable) may be represented by a symbol or letter (e.g., $13 - \square = 8$ ; $4n = 12$ ). - Flexibly uses symbols and letters to represent unknown quantities in equations (e.g., knows that $4 + \square = 7$ ; $4 + x = 7$ ; and $4 + y = 7$ all represent the same equation with $\square$ , $x$ , and $y$ representing the same value). - Interprets and writes algebraic expressions (e.g., $2n$ means two times a number; subtracting a number from 7 can be written as $7 - n$ ). - Understands a variable as a changing quantity (e.g., $5s$ , where $s$ can be any value).
PR4: Demonstrate and explain the meaning of preservation of equality, concretely, pictorially and symbolically.	<b>Patterning Unit 2: Variables and Equations</b> 6: Investigating Equality in Equations 10: Consolidation of Variables and Equations	<b>Big Idea: Patterns and relations can be represented with symbols, equations, and expressions.</b> <b>Understanding equality and inequality, building on generalized properties of numbers and operations</b> - Recognizes that an equal sign between two expressions with variables indicates that the expressions are equivalent (e.g., $5n - 4 = 3n$ ; $3r = 2 + s$ ). - Investigates and models the meaning of preservation of equality of single variable equations (e.g., $3x = 12$ ).

**Correlation of Prince Edward Island Program of Studies with Mathology  
Grade 6  
(Shape and Space: Measurement)**

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Use direct and indirect measure to solve problems.		
<b>Specific Curriculum Outcomes</b> SS1: Demonstrate an understanding of angles by: <ul style="list-style-type: none"> <li>• identifying examples of angles in the environment</li> <li>• classifying angles according to their measure</li> <li>• estimating the measure of angles using 45°, 90° and 180° as reference angles</li> <li>• determining angle measures in degrees</li> <li>• drawing and labelling angles when the measure is specified.</li> </ul>	<b>Geometry Unit 1A: 2-D Shapes and Angles</b> 1: Classifying and Measuring Angles 2: Measuring and Constructing Angles 6: Consolidation of 2-D Shapes and Angles	<b>Big Idea: Many things in our world (e.g., objects, spaces, events) have attributes that can be measured and compared. Understanding attributes that can be measured, compared, and ordered</b> - Understands angle as an attribute that can be measured and compared. - Understands angle is additive (e.g., 90° can be visualized as nine sectors that are 10° each). <b>Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. Selecting and using units to estimate, measure, construct, and make comparisons</b> - Measures, constructs, and estimates angles using degrees. <b>Big Idea: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes. Investigating geometric attributes and properties of 2-D shapes and 3-D solids</b> - Draws, compares, and classifies angles (i.e., right, acute, obtuse, straight, reflex).
SS2: Demonstrate that the sum of interior angles is: <ul style="list-style-type: none"> <li>• 180° in a triangle</li> <li>• 360° in a quadrilateral.</li> </ul>	<b>Geometry Unit 1A: 2-D Shapes and Angles</b> 3: Classifying Triangles 4: Identifying and Constructing Triangles 6: Consolidation of 2-D Shapes and Angles	<b>Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. Understanding relationships among measured units</b> - Investigates and generalizes sum of interior angles of triangles (i.e., sum of angles of a triangle is 180°).

<p>SS3: Develop and apply a formula for determining the:</p> <ul style="list-style-type: none"> <li>• perimeter of polygons</li> <li>• area of rectangles</li> <li>• volume of right rectangular prisms.</li> </ul>	<p><b>Measurement Unit 1A: Perimeter, Area, Volume, and Capacity</b></p> <p>1: Determining the Perimeter of Polygons</p> <p>2: Determining the Area of Rectangles</p> <p>4: Determining the Volume of Right Rectangular Prisms</p> <p>6: Consolidation of Perimeter, Area, Volume, and Capacity</p>	<p><b>Big Idea: Patterns and relations can be represented with symbols, equations, and expressions.</b> <b>Using variables, algebraic expressions, and equations to represent mathematical relations</b></p> <ul style="list-style-type: none"> <li>- Uses expressions and equations with variables to represent generalized relations and algorithms (e.g., <math>P = 2l + 2w</math>).</li> </ul> <p><b>Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons.</b> <b>Selecting and using units to estimate, measure, construct, and make comparisons</b></p> <ul style="list-style-type: none"> <li>- Measures, constructs, and estimates perimeter and area of regular and irregular polygons.</li> </ul> <p><b>Understanding relationships among measured units</b></p> <ul style="list-style-type: none"> <li>- Develops and generalizes strategies to compute area and perimeter of rectangles.</li> <li>- Develops and generalizes strategies and formulas to compute volumes of right rectangular prisms.</li> </ul>
---	---	---

**Correlation of Prince Edward Island Program of Studies with Mathology  
Grade 6  
(Shape and Space: 3-D Objects and 2-D Shapes)**

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them.		
<b>Specific Curriculum Outcomes</b> SS4: Construct and compare triangles, including: <ul style="list-style-type: none"> <li>• scalene</li> <li>• isosceles</li> <li>• equilateral</li> <li>• right</li> <li>• obtuse</li> <li>• acute</li> </ul> in different orientations.	<b>Geometry Unit 1A: 2-D Shapes and Angles</b> 3: Classifying Triangles 4: Identifying and Constructing Triangles 6: Consolidation of 2-D Shapes and Angles	<b>Big Ideas: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes.</b> <b>Investigating geometric attributes and properties of 2-D shapes and 3-D solids</b> - Sorts, describes, constructs, and classifies polygons based on side attributes (e.g., parallel, perpendicular, regular/irregular). - Sorts, describes, and classifies 2-D shapes based on their geometric properties (e.g., side length, angles, diagonals). - Classifies 2-D shapes within a hierarchy based on their properties (e.g., rectangles are a subset of parallelograms).
SS5: Describe and compare the sides and angles of regular and irregular polygons.	<b>Geometry Unit 1A: 2-D Shapes and Angles</b> 5: Investigating Polygons 6: Consolidation of 2-D Shapes and Angles	<b>Big Ideas: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes.</b> <b>Investigating geometric attributes and properties of 2-D shapes and 3-D solids</b> - Sorts, describes, constructs, and classifies polygons based on side attributes (e.g., parallel, perpendicular, regular/irregular). - Sorts, describes, and classifies 2-D shapes based on their geometric properties (e.g., side lengths, angles, diagonals).

**Correlation of Prince Edward Island Program of Studies with Mathology  
Grade 6  
(Shape and Space: Transformations)**

Curriculum Expectations	Grade 6 Mathology.ca	Pearson Canada Grades 4-6 Mathematics Learning Progression
<b>General Curriculum Outcome:</b> Describe and analyze position and motion of objects and shapes.		
<b>Specific Curriculum Outcomes</b> SS6: Perform a combination of translation(s), rotation(s) and/or reflection(s) on a single 2-D shape, with and without technology, and draw and describe the image.	<b>Geometry Unit 2A: Transformations</b> 7: Rotating 2-D Shapes on a Grid 8: Single Transformations on a Grid 9: Combining Transformations on a Grid 12: Consolidation of Transformations	<b>Big Ideas: 2-D shapes and 3-D solids can be transformed in many ways and analyzed for change.</b> <b>Exploring 2-D shapes and 3-D solids by applying and visualizing transformations</b> - Identifies, describes, and performs single transformations (i.e., translation, reflection, rotation) on 2-D shapes. - Identifies, describes, applies, and creates a combination of successive transformations on 2-D shapes.
SS7: Perform a combination of successive transformations of 2-D shapes to create a design, and identify and describe the transformations.	<b>Geometry Unit 2A: Transformations</b> 9: Combining Transformations on a Grid 12: Consolidation of Transformations	<b>Big Ideas: 2-D shapes and 3-D solids can be transformed in many ways and analyzed for change.</b> <b>Exploring 2-D shapes and 3-D solids by applying and visualizing transformations</b> - Identifies, describes, and performs single transformations (i.e., translation, reflection, rotation) on 2-D shapes. - Identifies, describes, applies, and creates a combination of successive transformations on 2-D shapes.
SS8: Identify and plot points in the first quadrant of a Cartesian plane using whole number ordered pairs.	<b>Geometry Unit 2A: Transformations</b> 10: Plotting and Reading Coordinates 11: Transformations on a Coordinate Plane 12: Consolidation of Transformations	<b>Big Idea: Objects can be located in space and viewed from multiple perspectives.</b> <b>Locating and mapping objects in space</b> - Develops understanding of a Cartesian plane as a coordinate system using perpendicular axes. - Plots and locates points on a Cartesian plane, and relates the location to the two axes. (Limited to the first quadrant.)

<p>SS9: Perform and describe single transformations of a 2-D shape in the first quadrant of a Cartesian plane (limited to whole number vertices).</p>	<p><b>Geometry Unit 2A: Transformations</b> 11: Transformations on a Coordinate Plane 12: Consolidation of Transformations</p>	<p><b>Big Idea: Objects can be located in space and viewed from multiple perspectives.</b> <b>Locating and mapping objects in space</b> - Plots and locates points on a Cartesian plane, and relates the location to the two axes. (Limited to the first quadrant.) - Analyzes and locates the vertices of 2-D shapes after transformation on a Cartesian plane. (Limited to the first quadrant.)</p>
