

Parts of Plants

All plants have the same parts, but they may look very different from one type of plant to another.

This plant has four parts.

Each part has a different name.

Each part has a different job to do.

Word box
flower

1 Which part is the flower?
Point to it.

 **2a Do all plants have flowers?**

2b Explain your answer.

Science Skills

Leaves – Observe it!

When you look at the plants around where you live you will see that each type of plant has a different sort of leaf.

Leaves have different shapes, sizes and textures. Some are shiny, some are dull. Some are smooth and some are hairy. Leaves help us to identify a plant.

Bougainvillea

Date palm

Geranium leaves

How many different leaves can you find? Find leaves that are tiny, spiky, rounded, smooth, large, pointed, rough, two-colours, shiny or dark.

- 1 Describe two different leaves you have found. How are they different?
- 2 Find out the names of the plants they come from.
- 3 Look at your leaves with a magnifying glass. What can you see?
