

About 750,000 people in the UK have dementia¹

This January, the Alzheimer's Society published a report on the rates of dementia diagnosis in the UK. The report highlighted that 'the proportion of people with dementia who have a formal diagnosis is 46%, compared with 43% in 2011'; figures which show a need for further information on diagnosis and understanding to be provided.²

With the launch of Dementia UK's *Time for a Cuppa* campaign, we wanted to draw your attention (over a cup of tea) to our range of assessments available to professionals who assess patients whom show signs of dementia.

In recognition of this week we are also offering **10% discount** on the assessments featured here when you place an order before 30 April 2013. To take advantage of this offer, please call our customer service department on **0845 630 8888** quoting discount code: **ZATTEA13** or order online via our website www.pearsonclinical.co.uk and add the discount code at the checkout.

If you would like to find out more about a particular product, over a cup of tea, our Sales Consultants can provide free product demonstrations. Contact us on **0207 010 2875** or visit www.pearsonclinical.co.uk/salesconsultants.

Brief Cognitive Status Exam (BCSE)

David Wechsler, 2011

COMPLIMENTS THE NEW TFLS^{UK}

Age Range: 16 years and older
Qualification Code: CL2
Administration: Individual, 15 to 20 minutes

A brief and reliable screening tool, the *Brief Cognitive Status Exam* (BCSE) can be used by Psychologists and Allied Health Professionals to evaluate global cognitive functioning in patients with suspected memory deficits or those who are diagnosed with a wide range of neurological, psychiatric and developmental disorders. Due to its brevity it is particularly useful for those with limited attention span, mild learning difficulties or dementia. The BCSE compliments the new TFLS^{UK} (overleaf) so that together they provide a cognitive and performance based assessment.

The BCSE consists of 12 items across 7 content areas: Orientation, Time Estimation, Mental Control, Organisation - Planning, Incidental Recall, Inhibitory Control and Verbal Production.

Complete Kit: 978 0 749162 24 5 £135.00 exc VAT
 Record Forms, Pack of 25: 978 0 749162 20 7 £41.50 exc VAT

"A key advantage of this instrument is its speed and ease of use. It takes up to fifteen minutes to administer. Whilst designed only as a quick screen, it can be an effective way of determining if there is a need for further assessment, or if the results gained are sufficient to answer the question posed. For example, if the query is around general cognitive ability and the client is noted to fit in the average ranges, this can be helpful and may mean there is no need for further assessment."
 Dr. Carol A. Ireland, CPsychol, MBA, Forensic Psychologist, Chartered Scientist, University of Central Lancashire and CCATS (Coastal Child and Adolescent Therapy Services)

The Functional Living Scale - UK Version (TFLS^{UK})

C. Munro Cullum, Myron F Weiner and Kathleen C Saine, 2012

COMPLIMENTS THE BCSE

Age Range: 16 years to 90 years 11 months

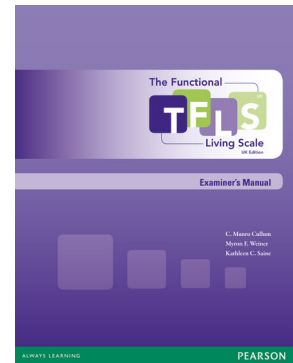

Qualification Code: CL3

Administration: Individual - 15 minutes

UK NORMS

TFLS^{UK} is an ecologically valid, performance based measure of functional abilities with an emphasis on instrumental activities of daily living (IADL) skills. Brief and easy to use, this measure will be useful for professionals whose clients' goal is to return to independence. It can be used to aid treatment planning, evaluate outcomes, support placement decisions and monitor disease progress.

TFLS^{UK} covers four functional domains: Time, Money and Calculation, Communication and Memory.

Benefits

- Assesses functional abilities quickly and easily
- Screens for dementia with a tool focused on skills likely to be affected by cognitive decline
- Monitors functional decline and disease progression
- Monitors treatment/drug efficacy
- Determines level of care required to adapt treatment plans
- Compliments the new BCSE to provide cognitive and performance based assessment.

Repeatable Battery for the Assessment of Neuropsychological Status (RBANSTM)

Christopher Randolph, 1998

Age Range: 20 years to 89 years

Qualification Code: CL2

Administration: Individual - 30 minutes

The *Repeatable Battery for the Assessment of Neuropsychological Status (RBANSTM)* is a brief, individually administered test that helps you measure cognitive decline in adults who have neurologic injury or disease such as dementia, head injury or stroke.

You can administer the 12 subtests to obtain a quick sampling of five important cognitive areas: Immediate memory, Visuospatial/constructional, Attention, Language and Delayed memory.

Two parallel forms are provided for measuring change in the client's neuropsychological status over time.

Beck Depression Inventory®-II (BDI®-II)

Aaron T Beck, Gregory K Brown and Robert A Steer, 1996

BESTSELLER

Age Range: 13 years to 80 years

Qualification Code: CL2

Administration: Individual - 5 minutes

The *Beck Depression Inventory*®, Second Edition (*BDI*®-II), the most widely used instrument for detecting depression.

Clinically sensitive the *BDI*®-II consists of 21 items to assess the intensity of depression in clinical and normal patients. Each item is a list of four statements arranged in increasing severity about a particular symptom of depression, and is in line with current depression criteria of the *DSM-IV*.

The *BDI*®-II scale includes updates to items that deal with symptoms of weight loss, changes in body image, and somatic preoccupation.

Norms: Standardised on clinical and non-clinical samples.

Complete kit: 978 0 158018 37 9 £95.00 exc VAT

Record forms, Pack of 25: 978 0 158018 39 3 £49.50 exc VAT

“At least one in five people in the UK will experience depression at some time in their lives. Depression is common among people with dementia and their carers. It is particularly common in people who have vascular dementia or Parkinson’s dementia.” Alzheimer’s Society, accessed February 2013, http://www.alzheimers.org.uk/site/scripts/documents_info.php?documentID=139

Beck Depression Inventory® - FastScreen (BDI®-FastScreen)

Aaron T Beck, Gregory K Brown and Robert A Steer, 2000

BESTSELLER

Age Range: Adult

Qualification Code: CL2

Administration: Individual - less than 5 minutes

The *BDI*®-FastScreen builds on 40 years of psychometric data and clinical experience. It is a 7-item self report, case-finding instrument that screens for depression in adolescents and adults.

Consisting of items extracted from the *BDI*®-II, it measures the cognitive and affective symptoms of depression, while excluding somatic and performance symptoms that might be attributable to other conditions. It is a quick and effective way to assess depression in populations with biological, medical, alcohol and/or substance abuse.

The report can be completed in under 5 minutes.

Complete kit: 978 0 158019 41 3 £90.00 exc VAT

Record forms, Pad of 50: 978 0 158019 43 7 £51.50 exc VAT

Cognitive Linguistic Quick Test (CLQT)

Nancy Helm-Estabrooks, 2001

Age Range: 18 years to 89 years

Qualification Code: CL2

Administration: Individual - 15 to 30 minutes

The *Cognitive Linguistic Quick Test (CLQT)* enables you to quickly determine severity ratings for five primary domains of cognition (attention, memory, executive functions, language and visuospatial skills) and a Composite Severity Rating for adults with known or suspected neurological impairment due to strokes, head injury or dementia.

CLQT's ten tasks tap specific cognitive skills within a short period and with relatively simple administration and scoring procedures. Use CLQT results to target areas for direct treatment or everyday management of impaired skills, identify the need for more in-depth testing, or help determine a different diagnosis. The full test can be administered at a table or bedside, as long as the patient can sit up and use a pen.

Complete kit: 978 0 158328 00 3 £218.00 exc VAT

Record forms/response booklets, Pack of 25: 978 0 158328 03 4 £69.00 exc VAT
