

Empowered by Technology - Jessica Santana

Being a first generation college graduate, I realized that there was a huge discrepancy between where I was in my career and the community that I was from.

My co-founder and I talked about the challenges, you know, associated with having industry and education actually connect with one another. Hence, the founding of New York on Tech.

New York on Tech's mission is to prepare the next generation of technology leaders emerging from New York City by creating pathways to degrees and careers in technology for students.

As we think about our classrooms, our organizational environments, and how every single day we're seeing them more and more being powered by technology, I think it's critical for us to be thinking about how we can bring digital learning to students.

I'm starting to see people actually take their education in their own hands.

I think there's an opportunity for us to reimagine what education can look like.
