>> A very hectic time in semester, just trying to find the best deal I can so I'm able to get my materials for the course.

>> But having that ability to go digital and access it from wherever, whenever has helped me so much.

>> But I've used a lot of digital course materials in actually my Spanish Classes, my like, general education classes. Very convenient, it was already packaged for you, ready to go, which is really nice.

>> The nice about integrating technology into my school work is that, I get to have a lot more accessibility. So, I mean, where I might do a little bit of work on my phone, later I can go home and finish it on my computer. So, I like that being able to switch back and forth, that's really beneficial to me.

>> With my first class with Inclusive Access I found it very easy to access my textbook on the very first day. I just simply opted in, entered my access code that I got right away, and was able to access materials the very first day of classes. And it was the best deal around, so that saved me so much time, so much stress. And it really was relieving to have my materials the first day and not get behind in my classes from day one.
