

Organic Chemistry

Richard Mullins

Chapter	Section	Name	Chapter	Section	Name
<i>Introduction to Organic Chemistry</i>			<i>Stereoisomerism: Arrangement of Atoms in Space</i>		
1	1	Organic Chemistry: the course	6	1	Objects and their mirror images
1	2	Grit	6	2	Drawing tetrahedral atoms in 3-D
1	3	Mindset	6	3	Naming stereoisomers/absolute configuration
1	4	How the brain works: making it stick	6	4	Properties of enantiomers
1	5	Using the learner-centered approach: how to use this book	6	5	Another type of stereoisomerism—diastereomers
1	6	Use your allies	6	6	Enantioselective synthesis—challenges
1	7	“One Shining Moment”	6	7	Chiral compounds without asymmetric atoms
<i>General Chemistry Translated: Finding the Electrons</i>			6	8	Right-hand/left-hand rule revisited
2	1	Structure of the atom	<i>Principles of Green (Organic) Chemistry</i>		
2	2	Electronic structure	7	1	Twelve Principles of Green Chemistry—an overview
2	3	Atoms to molecules	7	2	Application of the 12 principles to organic chemistry
2	4	Drawing Lewis structures	<i>Alkenes 1: Properties and Electrophilic Additions</i>		
2	5	Shapes of molecules	8	1	Properties of Alkenes
2	6	Bonding in molecules	8	2	Hydrohalogenation—addition of HX
2	7	Molecular orbital theory	8	3	Addition of water
2	8	Resonance	<i>Alkenes 2: Oxidation and Reduction</i>		
<i>Alkanes and Cycloalkanes: Properties and Conformational Analysis</i>			9	1	Oxidation of alkenes
3	1	Alkanes: an overview	9	2	Reduction of alkenes—catalytic hydrogenation
3	2	Drawing organic molecules	9	3	Special topic: enantioselective oxidation–reduction of alkenes
3	3	Alkane nomenclature	<i>Alkynes: Electrophilic Addition and Redox Reactions</i>		
3	4	Conformational analysis	10	1	Properties of alkynes
3	5	Cycloalkanes: an overview	10	2	Nomenclature of alkynes
3	6	Strain in rings: conformational analysis	10	3	Molecular orbital picture of alkyne
3	7	Cyclohexane conformations	10	4	Implications of the molecular orbital picture
3	8	Tour of functional groups	10	5	Using the acidic hydrogen: forming C–C bonds
<i>Acids and Bases/Electron Flow</i>			10	6	Reduction of alkynes
4	1	Acids and bases: three definitions	10	7	Organizing our tools: reaction sheets
4	2	Brønsted–Lowry acid–base reactions: a detailed analysis	10	8	Electrophilic additions to alkynes—general overview
4	3	Measuring acid strength	10	9	Synthesis of organic molecules: putting it all together
4	4	What makes an acid acidic or a base basic? Structural effects on acidity/conjugate base stability	10	10	Concluding thoughts
4	5	Lewis acid–Lewis base definition	<i>Properties and Synthesis of Alkyl Halides: Radical Reactions</i>		
<i>Chemical Reaction Analysis: Thermodynamics and Kinetics</i>			11	1	General structure of haloalkanes
5	1	Chemical reaction analysis: rotation around a single bond	11	2	Nomenclature of haloalkanes
5	2	Chemical reaction analysis: reactions of acids and bases	11	3	Properties of haloalkanes
5	3	Chemical reaction analysis: halogenation of alkanes			
5	4	Halogenation as a synthetic technique: a brief preview			

Chapter	Section	Name	Chapter	Section	Name
11	4	Molecular orbital picture of haloalkanes	15	5	Advanced 1H NMR topics
11	5	Preparation of alkyl halides	15	6	13C NMR spectroscopy: an overview
11	6	Radical autoxidation	15	7	13C NMR spectroscopy: analysis of a spectrum
11	7	Radical inhibition	15	8	Advanced 13C NMR topics
<i>Substitution and Elimination: Reaction of Haloalkanes</i>			<i>Metals in Organic Chemistry</i>		
12	1	Substitution and elimination: a general overview	16	1	Organometallics: an overview
12	2	Substitution: a detailed overview	16	2	Reduction of C-X
12	3	Distinguishing between SN2 and SN1	16	3	Carbenes
12	4	SN2 vs. SN1 outcomes	16	4	Transition metal-catalyzed coupling
12	5	Elimination: a detailed overview	16	5	Gilman reagents/organocuprates
12	6	Distinguishing between E2 and E1	16	6	Olefin metathesis
12	7	E2 vs. E1 outcomes	<i>Carbonyl Addition Reactions: Aldehydes and Ketones</i>		
12	8	Substitution vs. elimination	17	1	Introduction to aldehydes and ketones
<i>Alcohols, Ethers and Related Compounds: Substitution and Elimination</i>			17	2	Resonance structure of the carbonyl group
13	1	General structure of alcohols, ethers, thiols and thioethers	17	3	Nucleophilic addition reactions of carbonyls
13	2	Nomenclature of Alcohols	17	4	Comparing aldehyde and ketone reactivity
13	3	Physical properties of alcohols	17	5	Addition of carbon nucleophiles to aldehydes and ketones
13	4	Molecular orbital picture of alcohols	17	6	The Wittig reaction
13	5	Previous alcohol synthesis	17	7	Addition of oxygen nucleophiles to aldehydes and ketones
13	6	Reactions of alcohols	17	8	Addition of nitrogen nucleophiles to aldehydes and ketones
13	7	Hydroxide as a leaving group: substitution	17	9	Reduction
13	8	Hydroxyl as leaving group: elimination	17	10	Oxidation of aldehydes and ketones
13	9	Oxidation of alcohols	17	11	Concluding thoughts
13	10	Ethers	<i>Nucleophilic Acyl Substitution 1: Carboxylic Acids</i>		
13	11	Synthesis of ethers	18	1	General structure of carboxylic acids
13	12	Reactions of ethers	18	2	Nomenclature of carboxylic acids
13	13	Epoxides	18	3	Molecular orbital picture of carboxylic acids
13	14	Protecting groups	18	4	Physical properties of carboxylic acids
<i>Structural Identification 1: Infrared Spectroscopy and Mass Spectrometry</i>			18	5	Synthesis of carboxylic acids
14	1	Structural identification and spectroscopy: an overview	18	6	Reactions of carboxylic acids: acid-base reactions
14	2	Infrared spectroscopy: practical usage	18	7	Reactions of carboxylic acids—nucleophilic acyl substitution
14	3	Infrared spectroscopy: background theory	18	8	Other reactions of carboxylic acids
14	4	Infrared spectroscopy: a tour of functional groups	<i>Carboxylic Acid Derivatives: Nucleophilic Acyl Substitution 2</i>		
14	5	Mass spectrometry: practical usage	19	1	General structure of carboxylic acid derivatives
14	6	Mass spectrometry: background theory	19	2	Nomenclature of carboxylic acid derivatives
14	7	Mass spectrometry: a tour of fragmentations	19	3	Molecular orbital picture of carboxylic acid derivatives
14	8	IR and MS combined	19	4	Physical properties of carboxylic acid derivatives
<i>Structural Identification 2: Nuclear Magnetic Resonance Spectroscopy</i>			19	5	Synthesis of carboxylic acid derivatives: general considerations
15	1	Nuclear magnetic resonance: an overview	19	6	Reactions of carboxylic acid derivatives—nucleophilic acyl substitution
15	2	NMR spectroscopy: practical usage	19	7	Functional group interconversion
15	3	NMR spectroscopy: background theory			
15	4	1H NMR spectroscopy: theory to practice			

Chapter	Section	Name	Chapter	Section	Name
19	8	Reduction of carboxylic acid derivatives			
19	9	Organometallics with carboxylic acid derivatives			
19	10	Reactions of nitriles			
<i>Enolates/Carbonyl Addition and Substitution</i>			<i>Amines: Structure, Reactions, and Synthesis</i>		
20	1	Chemistry at the α -carbon	25	1	General structure of amines
20	2	Enols	25	2	Nomenclature of amines
20	3	Enolates	25	3	Molecular orbital picture of amines
20	4	Claisen condensation	25	4	Properties of amines
20	5	Alkylation of activated methylenes	25	5	Synthesis of 1° amines
20	6	Enamines	25	6	General synthesis of amines
20	7	Special topic: reactions of enolates in the synthesis of atorvastatin	25	7	Reactions of amines
<i>Conjugated Systems 1: Stability and Addition Reactions</i>			<i>Amino Acids, Proteins, and Peptide Synthesis</i>		
21	1	Conjugated systems: an overview	26	1	General structure of amino acids
21	2	Enhanced stability in conjugated systems	26	2	Standard amino acids
21	3	Molecular orbital picture of conjugated alkenes	26	3	Acid-base reactions of amino acids
21	4	Electrophilic addition reactions of conjugated systems	26	4	Amino acid synthesis
21	5	Nucleophilic addition to conjugated carbonyls	26	5	Reactions of amino acids
<i>Conjugated Systems 2: Pericyclic Reactions</i>			26	6	Proteins: a general overview
22	1	Pericyclic reactions: an overview	26	7	Protein structure
22	2	Frontier molecular orbital theory	26	8	Protein analysis: a sample
22	3	Diels-Alder cycloaddition	26	9	Peptide synthesis
22	4	Other pericyclic reactions	<i>Carbohydrates, Nucleic Acids, and Lipids</i>		
<i>Benzene 1: Aromatic Stability and Substitution Reactions</i>			27	1	Carbohydrates: an overview
23	1	The discovery of benzene: a very stable molecule	27	2	Monosaccharides
23	2	Aromaticity	27	3	Cyclic monosaccharides
23	3	Antiaromaticity	27	4	Reactions of monosaccharides: synthesis
23	4	Molecular orbitals of aromatics and antiaromatics	27	5	Reactions of monosaccharides: Fischer's structure determination of glucose
23	5	The nomenclature of benzene	27	6	Disaccharides
23	6	The substitution reactions of benzene	27	7	Polysaccharides
23	7	Electrophilic aromatic substitution: an overview	27	8	Nucleic acids
23	8	Regioselectivity in electrophilic aromatic substitution	27	9	Central dogma of molecular biology
23	9	Nucleophilic aromatic substitution	27	10	Lipids: an overview
23	10	Other substitution reactions	27	11	Triglycerides and fatty acids
<i>Benzene 2: Aromatic Stability and Substitution Reactions</i>			27	12	Triglyceride reactions
24	1	Benzene alters the reactivity of neighboring groups	27	13	Terpenes
24	2	Phenols	27	14	Steroids
24	3	Benzylic bromination	27	15	Prostaglandins
24	4	Benzylic substitution	<i>Synthetic Polymers</i>		
24	5	Side chain oxidation	28	1	Polymers: An Overview
24	6	Hydrogenolysis of benzyl ethers	28	2	Polymer representation and nomenclature
			28	3	Polymer classification
			28	4	Addition polymers
			28	5	Condensation polymers (nucleophilic acyl substitution)
			28	6	Other polymers
			28	7	Block copolymers
