As an instructor you always want your students to perform at their best but because everyone learns at a different pace it can be difficult to ensure that all students understand course concepts and come to class prepared. Dynamic study modules in MyLab help learners study effectively and at their own pace. Each module poses a series of questions about a course topic by focusing on just a handful of these questions at once students stay motivated and engaged. Dynamic study modules adapt each learners performance helping students overcome their own specific obstacles. After each set of questions students receive targeted feedback to reinforce their mastery with dynamic study modules. Learners build the confidence they need to deepen their understanding, participate meaningfully and perform better in and out of class dynamic study modules study better
