

Off the Page App

Learning anatomy and physiology can be a challenge.

Visualizing and understanding complex anatomy is an even bigger challenge.

That's why Pearson created the Off the Page App.

The Off the Page App works with select Pearson textbooks, turning static anatomical images into interactive 3D models.

Just hold your mobile device over select images from your textbook and watch the visual pop off the page.

Rotate or zoom in on the 3D models to explore the fine details of anatomical structures.

For many structures, you can even examine a cross-section — or get an alternate view — to gain another perspective.

Corresponding videos explain the anatomy and physiology of the image you're observing.

And for students who want to test their knowledge, the Off the Page App offers a labeling activity for each model.

Take learning into a whole new dimension.

Download the Off the Page App today.
