- ∉   **Professor Lisa Bohon**   California State University, Sacramento
- ∉   **Department Chair Shaun Dixon**   Jefferson Community and Technical College

Revel is the digital learning environment

that gives educators what they need to improve students' results

and it's getting even better.

An improved instructor dashboard

Professor Garth Neufeld *(00:21 – 00:31)*
I like the dashboard because at a glance I can see their performance collectively and I can use that information to address some things in my correspondences with my students. I use what I've assigned and the feedback I'm getting from them to inform my next steps.

More interactive features that get students reading and writing

Professor Lisa Bohon *(00:45 – 01:04)*
I use the tools that Pearson Revel has to offer. In particular, I use the quizzes and the essays. I assign those quizzes before the day of my lecture and so I have more people who have actually read the material. I have a more engaged and lively conversation within my class.

New mobile tools for instructors

Department Chair Shaun Dixon *(01:07 - 01:18)*
I'm also excited that Pearson has now developed an app geared more toward the instructor side of the courses. I'm constantly on the go. I need something quick that's going to allow me to check in on the progress of my students.

Revel is ready...

to empower great teaching and learning anytime and anywhere.

Professor Garth Neufeld *(01:25 – 01:30)*

I am excited that students are going to have the chance to use Revel.
