## Activity 7 Assessment Imperial Measures

| Measuring Length and Perimeter |  |  |
| :---: | :---: | :---: |
| Uses benchmarks to estimate in standard units ( $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ ) <br> "I used a big step as a referent for one metre. The classroom is about 7 big steps, or 7 m wide. Its perimeter is about 30 big steps, or 30 m ." | Measures using standard units ( $\mathrm{m}, \mathrm{cm}, \mathrm{mm}$ ) <br> "The perimeter is 28 cm ." | Selects and uses appropriate standard units <br> "I would use m because cm and mm are too small. The perimeter is 10 m because $3+2+3+2=10$." |

## Activity 7 Assessment Imperial Measures

| Measuring Length and Perimeter (con't) |  |  |
| :---: | :---: | :---: |
| Relates standard units of length <br> $(1 \mathrm{~m}=100 \mathrm{~cm}, 1 \mathrm{~cm}=10 \mathrm{~mm}, 1 \mathrm{~m}=1000 \mathrm{~mm})$ <br> "The door has a perimeter of 8 m . Since $1 \mathrm{~m}=100 \mathrm{~cm}, 8 \mathrm{~m}=800 \mathrm{~cm}$. Since $1 \mathrm{~m}=1000 \mathrm{~mm}, 8 \mathrm{~m}=8000 \mathrm{~mm}$." | Measures using imperial units (inch, foot, yard) <br> "The glue stick is 3 inches long." | Flexibly approximates conversions among imperial units and between metric and imperial units <br> "There are about 2 cm in 1 inch. <br> So, 3 inches is about $3 \times 2 \mathrm{~cm}$, or 6 cm . The glue stick is about 6 cm long." |
| Observations/Documentation |  |  |
