Properties of Triangles

| Properties of Triangles |  |  |  |
| :---: | :---: | :---: | :---: |
| Recognizes various triangles by the number of equal sides. <br> "I know the first is scalene, the second is isosceles, and the third is equilateral by looking at the number of equal sides." | Understands that triangles can be classified by side lengths and/or angle measures. <br> "The first triangle is an acute isosceles triangle because it has 2 equal sides and all acute angles. The second triangle is an obtuse scalene triangle because it has no equal sides and an obtuse angle." | Constructs and identifies triangles given some side and angle measures. <br> $\triangle P Q R$, with $P R=5 \mathrm{~cm}$, $\begin{aligned} \mathrm{PQ} & =5 \mathrm{~cm}, \\ \angle P & =140^{\circ} \end{aligned}$ <br> "I drew PQ = 5 cm and used a protractor to make a $140^{\circ}$ angle at <br> $P$. I drew $P R=5 \mathrm{~cm}$, then connected R to Q to make the third side. Angles Q and $R$ are each $20^{\circ}$ because the interior angles must add to $180^{\circ}$. This is an obtuse isosceles triangle." | Uses various geometric properties to determine unknown side and angle measures. <br> "This is an isosceles right triangle. $\angle B=90^{\circ}-46^{\circ} \text { so } \angle B=44^{\circ} .$ <br> The interior angles must add to $180^{\circ}$. I know that side AC and CB are the same." |
