## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Number)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Develop number sense. |  |  |  |
| Specific Learning Outcomes 6.N.1. Demonstrate an understanding of place value for numbers <br> - greater than one million <br> - less than onethousandth | Number Unit 1: Number <br> Relationships and Place Value <br> 1: Representing Larger Numbers (to 1000000 and Beyond) <br> 2: Representing Numbers in Different Forms <br> 5: Consolidation of Number Relationships and Place Value <br> Number Unit 3: Fractions, Decimals, Percents, and Integers <br> 15: Representing Decimals <br> 16: Comparing and Ordering Decimals <br> 21: Consolidation of Fractions, Decimals, Percents, and Integers | Unit 2 Questions 1, 2, 3, 4, 5, 6 (pp. 9-10) <br> Unit 7 Questions 6, 7, 8, 15, 16 (pp. 47-48, 50-51) | Big Idea: The set of real numbers is infinite. <br> Extending whole number understanding to the set of real numbers <br> - Extends whole number understanding to 1000000. <br> - Extends decimal number understanding to thousandths. <br> Big Idea: Numbers are related in many ways. <br> Comparing and ordering quantities (multitude or magnitude) <br> - Compares, orders, and locates whole numbers based on place-value understanding, and records using <, =, and > symbols. <br> - Compares, orders, and locates decimal numbers using place-value understanding. <br> Decomposing and composing numbers to investigate equivalencies <br> - Composes and decomposes whole numbers using standard and non-standard partitioning (e.g., 1000 is 10 hundreds or 100 tens). <br> - Composes and decomposes decimal numbers using standard and non-standard partitioning (e.g., 1.6 is 16 tenths or 0.16 tens ). <br> Big Idea: Quantities and numbers can be grouped by or partitioned into equal-sized units. <br> Unitizing quantities into base-ten units |

Pearson

|  |  |  | - Writes and reads whole numbers in multiple forms (e.g., 1358; one thousand three hundred fifty-eight; $1000+300+50+8)$. <br> - Understands that the value of a digit is ten times the value of the same digit one place to the right. <br> - Understands that the value of a digit is one-tenth the value of the same digit one place to the left. <br> - Writes and reads decimal numbers in multiple forms (e.g., numerals, number names, expanded form). |
| :---: | :---: | :---: | :---: |
| 6.N.2. Solve problems involving large numbers, using technology. | Number Unit 2: Fluency with Whole Numbers <br> 6: Solving Problems with Whole Numbers <br> 7: Estimating Reasonableness of Solutions <br> 9: Mental Math Strategies <br> 12: Consolidation of Fluency with Whole Numbers | Connecting and Reflecting: Patterns and Place Value (p. 21) | Big Idea: Quantities and numbers can be operated on to determine how many and how much. <br> Developing conceptual meaning of operations <br> - Extends whole number computation models to larger numbers <br> Developing fluency of operations <br> - Solves whole number computation using efficient strategies (e.g., mental computation, algorithms, calculating cost of transactions and change owing, saving money to make a purchase). |
| 6.N.3. Demonstrate an understanding of factors and multiples by <br> - determining multiples and factors of numbers less than 100 <br> - identifying prime and composite numbers <br> - solving problems involving factors or multiples | Number Unit 1: Number <br> Relationships and Place Value <br> 3: Identifying Factors and Multiples <br> 4: Identifying Prime and Composite Numbers <br> 5: Consolidation of Number Relationships and Place Value | Unit 2 Questions 7, 8, 9, 10, 11, 12, 13, 14, 15, 16 (pp. 11-14) | Big Idea: Numbers are related in many ways. <br> Decomposing and composing numbers to investigate equivalencies <br> - Decomposes numbers into prime factors. <br> Big Idea: Quantities and numbers can be operated on to determine how many and how much. Investigating number and arithmetic properties <br> - Determines whether one number is a multiple of any one-digit number. <br> - Examines and classifies whole numbers based on their properties (e.g., even/odd; prime; composite; divisible by 2,5 , and 10 ). <br> - Generates multiples and factors for numbers using flexible strategies. <br> - Distinguishes between and investigates properties of prime and composite numbers (e.g., prime factorization). <br> Developing fluency of operations <br> - Fluently recalls multiplication and division facts to 100. |

Pearson
$\left.\begin{array}{|l|l|l|l|}\hline \begin{array}{l}\text { 6.N.4. Relate improper } \\ \text { fractions to mixed numbers. }\end{array} & \begin{array}{l}\text { Number Unit 3: Fractions, } \\ \text { Decimals, Percents, and } \\ \text { Integers } \\ \text { 13: Representing Fractions } \\ \text { 14: Comparing and Ordering } \\ \text { Fractions } \\ \text { 21: Consolidation of Fractions, } \\ \text { Decimals, Percents, and Integers }\end{array} & \begin{array}{l}\text { Unit } 7 \text { Questions 1, 2, 3, 4, 5, 15, } \\ 16(p p .45-46,50-51)\end{array} & \begin{array}{l}\text { Big Idea: Numbers are related in many ways. } \\ \text { Comparing and ordering quantities } \\ \text { (multitude or magnitude) }\end{array} \\ \text { - Compares, orders, and locates fractions using flexible } \\ \text { strategies (e.g., comparing models; creating common } \\ \text { denominators or numerators). } \\ \text { Estimating quantities and numbers } \\ \text { - Estimates the size and magnitude of fractions by } \\ \text { comparing to benchmarks. } \\ \text { Decomposing and composing numbers to investigate } \\ \text { equivalencies } \\ \text { - Models equivalent forms of improper fractions and } \\ \text { mixed numbers using flexible strategies. }\end{array}\right\}$

| 6.N.8. Demonstrate an understanding of multiplication and division of decimals (involving 1-digit whole-number multipliers, 1digit natural number divisors, and multipliers and divisors that are multiples of 10 ), concretely, pictorially, and symbolically, by <br> - using personal strategies <br> - using the standard algorithms <br> - using estimation <br> - solving problems | Number Unit 4: Operations with Fractions, Decimals, and Percents <br> 22: Multiplying Decimals by 1Digit Numbers <br> 24: Dividing Decimals by 1-Digit Numbers <br> 30: Consolidation of Operations with Fractions, Decimals, and Percents | Unit 12 Questions 1, 2, 3, 4, 5, 14 (pp. 81-84, 87) | Big Idea: Quantities and numbers can be operated on to determine how many and how much. <br> Developing conceptual meaning of operations <br> - Demonstrates an understanding of decimal number computation through modelling and flexible strategies. <br> Developing fluency of operations <br> - Solves decimal number computation using efficient strategies. |
| :---: | :---: | :---: | :---: |
| 6.N.9. Explain and apply the order of operations, excluding exponents (limited to whole numbers). | Number Unit 2: Fluency with Whole Numbers <br> 8: The Order of Operations <br> 12: Consolidation of Fluency with Whole Numbers | Unit 3 Questions 1, 2, 3, 4, 14 (pp. 15-16, 20) | Big Idea: Quantities and numbers can be operated on to determine how many and how much. Investigating number and arithmetic properties <br> - Applies order of operations for whole numbers and explains the effect when order is not followed. |

## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Patterns and Relations: Patterns)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: Use patterns to describe the world and solve problems. |  |  |  |
| Specific Learning Outcomes 6.PR.1. Demonstrate an understanding of the relationships within tables of values to solve problems. | Patterning Unit 1: Patterning <br> 1: Investigating Patterns and Relationships in Tables and Graphs <br> 2: Solving Problems <br> 4: Consolidation of Patterning | Unit 1 Questions 1, 2, 3, 5, 6, 7, 8 (pp. 2-4, 6-8) | Big Idea: Regularity and repetition form patterns that can be generalized and predicted mathematically. <br> Representing patterns, relations, and functions <br> - Represents a numeric or shape pattern using a table of values by pairing the term value with a term number. <br> - Represents a mathematical context or problem with expressions and equations using variables to represent unknowns. <br> Generalizing and analyzing patterns, relations, and functions <br> - Explains the rule for numeric patterns including the starting point and change (e.g., given: $16,22,28,34$, .... Start at 16 and add 6 each time). <br> - Describes numeric and shape patterns using words and numbers. <br> - Predicts the value of a given element in a numeric or shape pattern using pattern rules. <br> - Describes the relationship between two numeric patterns (e.g., for every 4 steps, she travels 3 metres). |

| 6.PR. 2 Represent and describe patterns and relationships using graphs and tables. | Patterning Unit 1: Patterning <br> 1: Investigating Patterns and Relationships in Tables and Graphs <br> 2: Solving Problems <br> 4: Consolidation of Patterning | Unit 1 Questions 1, 2, 3, 5, 8 (pp. 2-4, 6, 8) | Big Idea: Regularity and repetition form patterns that can be generalized and predicted mathematically. <br> Representing patterns, relations, and functions <br> - Represents a numeric or shape pattern using a table of values by pairing the term value with a term number. <br> - Represents a mathematical context or problem with expressions and equations using variables to represent unknowns. <br> Generalizing and analyzing patterns, relations, and functions <br> - Explains the rule for numeric patterns including the starting point and change (e.g., given: 16, 22, 28, 34, .... Start at 16 and add 6 each time). <br> - Describes numeric and shape patterns using words and numbers. <br> - Predicts the value of a given element in a numeric or shape pattern using pattern rules. <br> - Describes the relationship between two numeric patterns (e.g., for every 4 steps, she travels 3 metres). |

## mathólogy

## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Patterns and Relations: Variables and Equations)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Represent algebraic expressions in multiple ways. |  |  |  |
| Specific Learning Outcomes 6.PR.3. Represent generalizations arising from number relationships using equations with letter variables. | Patterning Unit 2: Variables and Equations <br> 6: Investigating Equality in Equations <br> 7: Representing Generalizations in Patterns <br> 10: Consolidation of Variables and Equations <br> Measurement Unit 1A: <br> Perimeter, Area, Volume, and Capacity <br> 1: Determining the Perimeter of Polygons <br> 2: Determining the Area of Rectangles | Unit 1 Questions 1, 2, 3, 7, 8 (pp. 2-4, 7-8) <br> Unit 13 Questions 3, 4, 8, 9, 10, 11, 13 (pp. 89-90, 92-93, 95) | Big Idea: Patterns and relations can be represented with symbols, equations, and expressions. <br> Using variables, algebraic expressions, and equations to represent mathematical relations <br> - Understands an unknown quantity (i.e., variable) may be represented by a symbol or letter (e.g., $13-\square$ = $8 ; 4 n=12$ ). <br> - Flexibly uses symbols and letters to represent unknown quantities in equations (e.g., knows that $4+$ $\square=7 ; 4+x=7$; and $4+y=7$ all represent the same equation with $\square, x$, and $y$ representing the same value). <br> - Interprets and writes algebraic expressions (e.g., $2 n$ means two times a number; subtracting a number from 7 can be written as $7-n$ ). <br> - Understands a variable as a changing quantity (e.g., $5 s$, where $s$ can be any value). <br> - Uses expressions and equations with variables to represent generalized relations and algorithms (e.g., $P=2 /+2 w$ ). <br> Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. <br> Understanding relationships among measured units - Develops and generalizes strategies to compute area and perimeter of rectangles. |

| 6.PR.4. Demonstrate and explain the meaning of preservation of equality, concretely, pictorially, and symbolically. | Patterning Unit 2: Variables and Equations <br> 6: Investigating Equality in Equations <br> 10: Consolidation of Variables and Equations | Unit 14 Questions 4, 5, 7, 11, 13 (pp. 98-99, 101-102) | Big Idea: Patterns and relations can be represented with symbols, equations, and expressions. Understanding equality and inequality, building on generalized properties of numbers and operations <br> - Recognizes that an equal sign between two expressions with variables indicates that the expressions are equivalent (e.g., $5 n-4=3 n ; 3 r=2+$ s). <br> - Investigates and models the meaning of preservation of equality of single variable equations (e.g., $3 x=12$ ). |
| :---: | :---: | :---: | :---: |

## mathólogy

## Correlation of Manitoba Program of Studies with Mathology Grade 6 <br> (Shape and Space: Measurement)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Use direct or indirect measurement to solve problems. |  |  |  |
| Specific Learning Outcomes 6.SS.1. Demonstrate an understanding of angles by <br> - identifying examples of angles in the environment <br> - classifying angles according to their measure <br> - estimating the measure of angles using $45^{\circ}, 90^{\circ}$, and $180^{\circ}$ as reference angles <br> - determining angle measures in degrees <br> - drawing and labelling angles when the measure is specified | Geometry Unit 1A: 2-D Shapes and Angles <br> 1: Classifying and Measuring Angles <br> 2: Measuring and Constructing Angles <br> 6: Consolidation of 2-D Shapes and Angles | Unit 4 Questions 1, 2, 3, 12 (pp. 23-25, 29) | Big Idea: Many things in our world (e.g., objects, spaces, events) have attributes that can be measured and compared. <br> Understanding attributes that can be measured, compared, and ordered <br> - Understands angle as an attribute that can be measured and compared. <br> - Understands angle is additive (e.g., $90^{\circ}$ can be visualized as nine sectors that are $10^{\circ}$ each). <br> Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. <br> Selecting and using units to estimate, measure, construct, and make comparisons <br> - Measures, constructs, and estimates angles using degrees. <br> Big Idea: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes. Investigating geometric attributes and properties of <br> 2-D shapes and 3-D solids <br> - Draws, compares, and classifies angles (i.e., right, acute, obtuse, straight, reflex). |

| 6.SS.2. Demonstrate that the sum of interior angles is <br> - $180^{\circ}$ in a triangle <br> - $360^{\circ}$ in a quadrilateral | Geometry Unit 1A: 2-D Shapes and Angles <br> 3: Classifying Triangles <br> 4: Identifying and Constructing Triangles <br> 6: Consolidation of 2-D Shapes and Angles | Unit 4 Question 3 (pp. 24-25) | Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. Understanding relationships among measured units - Investigates and generalizes sum of interior angles of triangles (i.e., sum of angles of a triangle is $180^{\circ}$ ). |
| :---: | :---: | :---: | :---: |
| 6.SS.3. Develop and apply a formula for determining the <br> - perimeter of polygons <br> - area of rectangles <br> - volume of right rectangular prisms | Measurement Unit 1A: <br> Perimeter, Area, Volume, and <br> Capacity <br> 1: Determining the Perimeter of Polygons <br> 2: Determining the Area of Rectangles <br> 4: Determining the Volume of Right Rectangular Prisms <br> 6: Consolidation of Perimeter, Area, Volume, and Capacity | Unit 13 Questions 3, 4, 5, 8, 9, 10, 11, 13 (pp. 89-93, 95) <br> omit parts related to surface area | Big Idea: Assigning a unit to a continuous attribute allows us to measure and make comparisons. <br> Selecting and using units to estimate, measure, construct, and make comparisons <br> - Measures, constructs, and estimates perimeter and area of regular and irregular polygons. <br> Understanding relationships among measured units <br> - Develops and generalizes strategies to compute area and perimeter of rectangles. <br> - Develops and generalizes strategies and formulas to compute volumes of right rectangular prisms. |

## mathôlogy

## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Shape and Space: 3-D Objects and 2-D Shapes)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Describe the characteristics of 3-D objects and 2-D shapes, and analyze the relationships among them. |  |  |  |
| Specific Learning Outcomes 6.SS.4. Construct and compare triangles, including <br> - scalene <br> - isosceles <br> - equilateral <br> - right <br> - obtuse <br> - acute <br> in different orientations. | Geometry Unit 1A: 2-D Shapes and Angles <br> 3: Classifying Triangles <br> 4: Identifying and Constructing Triangles <br> 6: Consolidation of 2-D Shapes and Angles | Unit 4 Questions 5, 6, 7, 12 (pp. 25-26, 29) | Big Ideas: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes. Investigating geometric attributes and properties of 2-D shapes and 3-D solids <br> - Sorts, describes, constructs, and classifies polygons based on side attributes (e.g., parallel, perpendicular, regular/irregular). <br> - Sorts, describes, and classifies 2-D shapes based on their geometric properties (e.g., side length, angles, diagonals). <br> - Classifies 2-D shapes within a hierarchy based on their properties (e.g., rectangles are a subset of parallelograms). |
| 6.SS.5. Describe and compare the sides and angles of regular and irregular polygons. | Geometry Unit 1A: 2-D Shapes and Angles <br> 5: Investigating Polygons <br> 6: Consolidation of 2-D Shapes and Angles | Unit 4 Questions 8, 10a, 10b, 11, 12 (pp. 27-29) | Big Ideas: 2-D shapes and 3-D solids can be analyzed and classified in different ways by their attributes. Investigating geometric attributes and properties of 2-D shapes and 3-D solids <br> - Sorts, describes, constructs, and classifies polygons based on side attributes (e.g., parallel, perpendicular, regular/irregular). <br> - Sorts, describes, and classifies 2-D shapes based on their geometric properties (e.g., side lengths, angles, diagonals). |

Pearson

## mathólogy

## Correlation of Manitoba Program of Studies with Mathology Grade 6 <br> (Shape and Space: Transformations)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Describe and analyze position and motion of objects and shapes. |  |  |  |
| Specific Learning Outcomes 6.SS.6. Perform a combination of transformations (translations, rotations, or reflections) on a single 2-D shape, and draw and describe the image. | Geometry Unit 2A: <br> Transformations <br> 7: Rotating 2-D Shapes on a <br> Grid <br> 8: Single Transformations on a <br> Grid <br> 9: Combining Transformations on a Grid <br> 12: Consolidation of Transformations | Unit 5 Questions 3, 4, 9 (pp. 31-32, 36) | Big Ideas: 2-D shapes and 3-D solids can be transformed in many ways and analyzed for change. Exploring 2-D shapes and 3-D solids by applying and visualizing transformations <br> - Identifies, describes, and performs single transformations (i.e., translation, reflection, rotation) on 2-D shapes. <br> - Identifies, describes, applies, and creates a combination of successive transformations on 2-D shapes. |
| 6.SS.7. Perform a combination of successive transformations of 2-D shapes to create a design, and identify and describe the transformations. | Geometry Unit 2A: <br> Transformations <br> 9: Combining Transformations on a Grid <br> 12: Consolidation of Transformations | N/A | Big Ideas: 2-D shapes and 3-D solids can be transformed in many ways and analyzed for change. Exploring 2-D shapes and 3-D solids by applying and visualizing transformations <br> - Identifies, describes, and performs single transformations (i.e., translation, reflection, rotation) on 2-D shapes. <br> - Identifies, describes, applies, and creates a combination of successive transformations on 2-D shapes. |

| 6.SS.8. Identify and plot <br> points in the first quadrant of <br> a Cartesian plane using <br> whole-number ordered <br> pairs. | Geometry Unit 2A: <br> Transformations <br> 10: Plotting and Reading <br> Coordinates <br> 11: Transformations on a <br> Cartesian Plane <br> $12:$ Consolidation of <br> Transformations | Unit 5 Questions 1a, 2a <br> (pp. 30-31) | Big Idea: Objects can be located in space and viewed <br> from multiple perspectives. <br> Locating and mapping objects in space <br> - Develops understanding of a Cartesian plane as a <br> coordinate system using perpendicular axes. <br> - Plots and locates points on a Cartesian plane, and <br> relates the location to the two axes. (Limited to the <br> first quadrant.) |
| :--- | :--- | :--- | :--- |
| 6.SS.9. Perform and describe <br> single transformations of a 2- <br> D shape in the first quadrant <br> of a Cartesian plane (limited <br> to whole-number vertices). | Geometry Unit 2A: <br> Transformations <br> $11:$ Transformations on a <br> Cartesian Plane <br> $12:$ Consolidation of <br> Transformations | Unit 5 Questions 5, 6 (p. 33) | Big Idea: Objects can be located in space and viewed <br> from multiple perspectives. <br> Locating and mapping objects in space |
| - Plots and locates points on a Cartesian plane, and |  |  |  |
| relates the location to the two axes. (Limited to the |  |  |  |
| first quadrant.) |  |  |  |

## mathólogy

## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Statistics and Probability: Data Analysis)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Collect, display, and analyze data to solve problems. |  |  |  |
| Specific Learning Outcomes 6.SP.1. Create, label, and interpret line graphs to draw conclusions. | Data Management Unit 1: <br> Data Management <br> 1: Exploring Line Graphs <br> 6: Consolidation of Data Management | Unit 9 Questions 1, 4, 5, 8 (pp. 61-64, 66) | Big Idea: Formulating questions, collecting data, and consolidating data in visual and graphical displays help us understand, predict, and interpret situations that involve uncertainty, variability, and randomness. <br> Collecting data and organizing it into categories - Differentiates between discrete (e.g., votes) and continuous (e.g., height) data. <br> Creating graphical displays of collected data <br> - Represents data graphically using many-to-one correspondence with appropriate scales and intervals (e.g., each symbol on pictograph represents 10 people). <br> - Chooses and justifies appropriate visual representations for displaying discrete (e.g., bar graph) and continuous (e.g., line graph) data. |
| 6.SP.2. Select, justify, and use appropriate methods of collecting data, including <br> - questionnaires <br> - experiments <br> - databases <br> - electronic media | Data Management Unit 1: <br> Data Management <br> 3: Collecting and Organizing Data <br> 6: Consolidation of Data Management | Unit 9 Questions 3, 8 (pp. 63, 66) | Big Idea: Formulating questions, collecting data, and consolidating data in visual and graphical displays help us understand, predict, and interpret situations that involve uncertainty, variability, and randomness. <br> Collecting data and organizing it into categories <br> - Constructs data organizers to support data collection |

Pearson

|  |  |  | (e.g., creates tally chart or line plot on a grid to collect survey data). <br> - Selects and justifies an appropriate method of data collection (e.g., experiment, observation, survey) based on question posed. |
| :---: | :---: | :---: | :---: |
| 6.SP.3. Graph collected data and analyze the graph to solve problems. | Data Management Unit 1: <br> Data Management <br> 3: Collecting and Organizing Data <br> 4: Interpreting Graphs to Solve Problems <br> 6: Consolidation of Data Management | Unit 9 Questions 1, 5, 8 (pp. 61-62, 64-66) | Big Idea: Formulating questions, collecting data, and consolidating data in visual and graphical displays help us understand, predict, and interpret situations that involve uncertainty, variability, and randomness. <br> Creating graphical displays of collected data <br> - Represents data graphically using many-to-one correspondence with appropriate scales and intervals (e.g., each symbol on pictograph represents 10 people). <br> - Chooses and justifies appropriate visual representations for displaying discrete (e.g., bar graph) and continuous (e.g., line graph) data. <br> Reading and interpreting data displays and analyzing variability <br> - Reads and interprets data displays using many-toone correspondence. <br> Drawing conclusions by making inferences and justifying decisions based on data collected <br> - Draws conclusions on data presented. <br> - Interprets the results of data presented graphically from primary (e.g., class survey) and secondary (e.g., online news report) sources. |

## mathology

## Correlation of Manitoba Program of Studies with Mathology Grade 6 (Statistics and Probability: Chance and Uncertainty)

| Curriculum Expectations | Grade 6 Mathology.ca | Mathology Practice Workbook 6 | Pearson Canada Grades 4-6 Mathematics Learning Progression |
| :---: | :---: | :---: | :---: |
| General Learning Outcome: <br> Use experimental or theoretical probabilities to represent and solve problems involving uncertainty. |  |  |  |
| Specific Learning Outcomes <br> 6.SP.4. Demonstrate an understanding of probability by <br> - identifying all possible outcomes of a probability experiment <br> - differentiating between experimental and theoretical probability <br> - determining the theoretical probability of outcomes in a probability experiment <br> - determining the experimental probability of outcomes in a probability experiment <br> - comparing experimental results with the theoretical probability for an experiment | Data Management Unit 2: Probability <br> 7: Exploring Theoretical <br> Probability <br> 8: Independent Events <br> 9: Conducting Experiments <br> 10: Consolidation of Probability | Unit 10 Questions 1, 2, 5, 6, 8 (pp. 67-68, 70, 72) | Big Idea: Formulating questions, collecting data, and consolidating data in visual and graphical displays help us understand, predict, and interpret situations that involve uncertainty, variability, and randomness. <br> Collecting data and organizing it into categories <br> - Records the results of multiple trials of simple events. Using the language and tools of chance to describe and predict events <br> - Locates the likelihood of outcomes on a vocabularybased probability continuum (e.g., impossible, unlikely, likely, certain). <br> - Distinguishes between equally likely events (e.g., heads or tails on a fair coin) unequally likely events (e.g., spinner with differently sized sections). <br> - Identifies the sample space of independent events in an experiment (e.g., flipping a cup, drawing a coloured cube from a bag). <br> - Investigates and calculates the experimental probability (i.e., relative frequency) of simple events (e.g., 3 heads in 5 coins tosses is $\frac{3}{5}$ ). |

Unit 6: Coding Not required, but recommended
Unit 11: Financial Literacy Not required, but recommended
