Activity 4 Assessment Consolidating Area and Perimeter

| Relationships Among Standard Units of Area |  |  |
| :---: | :---: | :---: |
| Recognizes that area is measured using square units <br> "I covered the rectangle with square tiles and determined the area to be 20 square units." | Relates a centimetre/metre to a square centimetre/metre <br> "A square with side length 1 m has an area of $1 \mathrm{~m}^{2}$." | Expresses the relationship between square centimetres, square metres, and square kilometres $\begin{aligned} " 1 \mathrm{~m}=100 \mathrm{~cm}, \text { so } 1 \mathrm{~m}^{2} & =100 \mathrm{~cm} \times 100 \mathrm{~cm} \\ & =10000 \mathrm{~cm}^{2} \\ 1 \mathrm{~km}=1000 \mathrm{~m}, \text { so } 1 \mathrm{~km}^{2} & =1000 \mathrm{~m} \times 1000 \mathrm{~m} \\ & =1000000 \mathrm{~m}^{2 \prime} \end{aligned}$ |

## Activity 4 Assessment

 Consolidating Area and Perimeter| Relationships Among Standard Units of Area (cont'd) |  |  |
| :---: | :---: | :---: |
| Identifies which metric unit should be used to measure an area <br> The Classroom Floor <br> "I could use a metre stick to determine the length and width of the classroom. <br> So, I would use a square metre to measure the area of the floor." | Uses benchmarks to estimate area using metric units, then measures to check (square centimetre, square metre) <br> The Classroom Floor <br> "I visualize covering the classroom floor with about 50 tabletops, so I estimate its area to be about $50 \mathrm{~m}^{2}$. <br> When I measured to check, the classroom was 8 m long and 6 m wide. So, the actual area is $8 \mathrm{~m} \times 6 \mathrm{~m}=48 \mathrm{~m}^{2}$. My estimate was close." | Flexibly chooses an appropriate metric unit to estimate and measure area and explains reasoning <br> "I'd estimate and measure the area of the soccer field in square metres. I could use square centimetres, but the number would be so large that it would be difficult to relate to." |

## Activity 4 Assessment

 Consolidating Area and Perimeter
## Measuring Area and Perimeter of Rectangles

Recognizes that the perimeter of a rectangle is the distance around and area is the number of tiles that cover it

"Perimeter of rectangle: $3+5+3+5=16$, 16 units; Area: $3 \times 5=15,15$ square units.'

Uses algebraic formulas to determine the
perimeter and area of a rectangle

"To determine the perimeter of a rectangle, I use the formula $P=2 b+2 h$ and to determine the area, I use the formula $A=b \times h$ For a rectangle with $b=6 \mathrm{~m}$ and $h=3 \mathrm{~m}$ Perimeter: $2 \times 6 \mathrm{~m}+2 \times 3 \mathrm{~m}=18 \mathrm{~m}$ Area: $6 \mathrm{~m} \times 3 \mathrm{~m}=18 \mathrm{~m}^{2}$."

Compares the perimeters and areas of rectangles

5 cm

"Both rectangles have a perimeter of 18 cm : $2 \times 4+2 \times 5=18 ; 2 \times 6+2 \times 3=18$.
The rectangles have different areas: $4 \mathrm{~cm} \times 5 \mathrm{~cm}=20 \mathrm{~cm}^{2}$ and $6 \mathrm{~cm} \times 3 \mathrm{~cm}=18 \mathrm{~cm}^{2}$. .

Observations/Documentation

Activity 4 Assessment
Consolidating Area and Perimeter

| Measuring Area and Perimeter of Recter | ngles (cont'd) |  |
| :---: | :---: | :---: |
| Constructs a rectangle with given perimeter/area and explains strategy used $\text { Perimeter }=24 \mathrm{~m}$ <br> "To construct a rectangle with perimeter 24 m , the sum of the base and height needs to be $24 \mathrm{~m} \div 2=12 \mathrm{~m}$. I chose 8 m and 4 m . To determine the area, I multiplied the base by the height: $8 \mathrm{~m} \times 4 \mathrm{~m}=32 \mathrm{~m}^{2}$." | Constructs different rectangles for a given area and describes the rectangle with the least perimeter $\text { Area }=16 \mathrm{~cm}^{2}$ <br> "The rectangle with the least perimeter is a square." | Flexibly solves problems involving a given area and/or perimeter in a variety of contexts. <br> A square table can seat 1 student on each side. 24 tables are pushed together to make 1 large rectangular table. What is the greatest number of students who could be seated? <br> "For an area of 24 square units, the length and width can be: 1 and $24 ; 2$ and $12 ; 3$ and $8 ; 4$ and 6 . For the greatest number of students, the perimeter has to be the greatest, which means its width is the least, 1 unit, and the length is 24 units. The perimeter is 50 units, so 50 students can be seated." |
