

Detailed CONTENTS

Preface	xviii	Life-cycle surprises	23
		Longitudinal studies with unexpected twists	24
		BOX 1.8 How can you explain it? Cheerfulness, conscientiousness and longevity	24
		The adult development of 'late bloomers'	25
		Nurturing development through the lifespan	25
		Developmental optimisation	26
		BOX 1.9 A case in point: Optimising health education with traditional Indigenous art	27
		Parents and developmental optimisation	27
		Optimisation through education	27
		The optimising roles of health and helping professionals	28
		Looking forward	28
		Chapter summary	28
		For further interest	29
Part 1 Studying human development over the lifespan	1	CHAPTER 2 The Science of lifespan development: goals, theories and methodology	30
Overview	1	Chapter overview	31
CHAPTER 1 Lifespan developmental psychology	2	The scientific goals of lifespan research	31
Chapter overview	3	Three key scientific goals	31
Adults can grow psychologically through the whole of life	3	BOX 2.1 Activity suggestion: What can research tell us that we don't already know?	32
Hallmarks of the lifespan approach to psychological understanding	3	Descriptive research: Picturing psychological development age by age	32
Lifelong development	3	Interpreting descriptive age norms	33
Continuity and change	3	Explanatory research: Creating theories and testing predictions	35
BOX 1.1 Four luminary lifespans	4	BOX 2.2 How can you explain it? Age differences in IQ	36
Culture and the lifespan	5	BOX 2.3 Activity suggestion: Test your sleuthing skill	36
Normative lifespan transitions	6	Analogies for development: Pre-theoretical models	37
Why is age so important to psychologists?	6	The environmental-mechanistic model	37
The personal meaning of age	7	The organic-maturational model	37
BOX 1.2 A case in point: What it means to be 50	8	BOX 2.4 Using science: From description to explanation: Why do we age?	38
Personal plans for lifespan development	9	The dialectical model	38
The human lifespan today	9	BOX 2.5 Activity suggestion: Test your taste for the dialectical model of development	39
Social and historical changes in personal age consciousness	10	Optimisation: The goal of applied research	40
BOX 1.3 Activity suggestion: Lifeline drawing	10	Life-cycle surprises and optimisation research	40
Will you live to be 100?	10	The methods of developmental psychology	41
Culture, age and lifespan development	11	BOX 2.6 How can you explain it? Learning music in childhood boosts mental ability in old age	41
Filial piety and attitudes to age	11	Case studies	41
Indigenous ageing: Becoming an elder	12	Naturalistic observation	42
Development in historical perspective	14	BOX 2.7 A child called Louise	42
The history of childhood	14	Experimental research in developmental science	43
The history of adolescence	15	Self-report techniques	43
The history of adulthood, old age and the lifespan	15	Developmental research designs: Tracking psychological functioning over time	44
Age and society	17	The cross-sectional design	44
The normative social clock	17		
BOX 1.4 Activity suggestion: Age makes the news	17		
The problem of ageism	18		
BOX 1.5 A pause for thought: Is it wrong to laugh?	18		
BOX 1.6 How can you explain it? Ageism is a health hazard	19		
The science of lifespan human development	20		
Studying change	20		
The field of lifespan developmental psychology	20		
Core assumptions of the lifespan approach	21		
The concept of development	21		
Permanent change	22		
Qualitative and quantitative change	22		
Normative, generalisable change	22		
BOX 1.7 Activity suggestion: Development through art	23		
Progressive change: The actualising of hidden potential	23		

BOX 2.8 How can you explain it? Are Australians becoming more temperamental?	45	Twin studies: A window on nature and nurture	72
The longitudinal design	45	Twin comparisons: Intelligence and personality	73
Time-lag studies and time-of-test effects	47	Thinking critically about twin studies	73
Sequential methodologies	48	Identical twins: Identical treatment?	73
Theories of lifespan development	49	BOX 3.1 How can you explain it? Uncanny similarities	74
The psychoanalytic approach: Freud and Erikson	50	Shared and non-shared environment	75
Freud's theory	50	The children-of-twins (CoT) design	76
BOX 2.9 Freud's life	51	Studying polygenic inheritance with the adoption design	76
Erikson's theory	51	Adoption studies of intelligence and personality	76
BOX 2.10 Erikson's life	52	Combining adoption studies with twin studies in cross-cultural research	77
The cognitive-developmental approach:		Thinking critically about adoption designs	78
Piaget and Vygotsky	53	Effects of adoption itself on psychological development	78
Piaget's theory	53	Nature and nurture together: The interaction between heredity and environment	79
BOX 2.11 Piaget's life	54	BOX 3.2 Fountain-of-youth in one world, poison chalice in another	80
Vygotsky's theory	55	BOX 3.3 Expressing individuality: A 'whole' child of six	81
BOX 2.12 Vygotsky's life	56	Niche-picking: Children as active environmental engineers	81
Learning theories: Classical theories and the social learning approach	56	Non-shared family environments	81
Social learning and Bandura's social-cognitive learning theory	56	Heritable environments: Active and passive gene–environment correlations	82
BOX 2.13 A glossary of learning terminology	57	The range-of-reaction principle	82
Adult-oriented lifespan theories: Organic self-determination	58	Evolutionary preselection and specialisation	82
Buhler's theory	58	BOX 3.4 Activity suggestion: Bush tucker	83
BOX 2.14 Buhler's life	59	Why are children in the same family so different?	
Levinson's theory	59	Resolving the paradox of nature versus nurture	84
Vaillant's theory	60	Heredity's lifespan influence	85
Paul Baltes' cognitive lifespan theory	60	Delayed gene action	85
Selective optimisation with compensation	61	Gene–environment interactions in adult development	85
BOX 2.15 Baltes' life	61	Prenatal development: From zygote to foetus	87
Chapter summary	62	The period of the zygote	87
For further interest	63	The period of the embryo	87
		The period of the foetus	88
		Foetal brain development	89
		Cortical cell migration	90
		Prenatal myelination	90
		The emergence of behaviour	90
		BOX 3.5 How can you explain it? Does the nervous system 'age' before birth?	91
		Critical periods in prenatal development	91
		Teratogenic influences	91
		Optimising prenatal development	92
		BOX 3.6 Optimising development: The ecology of the womb	93
		BOX 3.7 How can you explain it? Maternal stress	93
		Prenatal cognitive development	93
		The human mind before birth	93
		The expectant parents during pregnancy	95
		Planned and unplanned pregnancies	95
		Expecting a boy or a girl	96
		BOX 3.8 How can you explain it? Life-cycle surprises: Does a mothers' attitude to the foetus predict its personality at age 15?	96
CHAPTER 3 In the beginning: Heredity, prenatal development and birth	64		
Chapter overview	65		
The first step in development: Heredity meets environment	66		
Genes, chromosomes and DNA	66		
Genes and individual differences	66		
Polygenic inheritance versus simple pairs of genes	67		
Dominance–recessivity in a gene pair	67		
Co-dominance and additive gene effects	67		
Sex-linked traits	68		
Chromosome abnormalities	68		
Genetic counselling	68		
The new genetics: Polygenic inheritance and quantitative methodologies	69		
Polygenic inheritance	69		
Genome-wide association studies	69		
Gene–environment interdependence	70		
Epigenesis and epigenetics	70		
Nurturant parenting shapes DNA	70		
Epigenetic shaping of the human brain	71		
Behaviour genetics	72		

The baby's birth	97	The development of sensory and perceptual skills	122
Stages of labour	97	The five senses at birth	122
The uncomplicated delivery	97	The development of vision and hearing during infancy	122
Childbirth complications: Prematurity and low birth weight	98	Perceptual development	123
BOX 3.9 Indigenous insight: Birth in a traditional Aboriginal community	98	Coordinating perceptual and motor skills	124
Long-term developmental consequences of birth complications	99	Cognition and learning during infancy	124
The transition to parenthood	99	Learning complex contingencies	124
BOX 3.10 A father's reaction to childbirth	99	Curiosity and attention	125
Chapter summary	100	BOX 4.7 The world of a 16-month-old	125
For further interest	101	Infant learning	126
Part 2 Infancy—from birth to age two	102	Piaget's sensorimotor stage: Concepts of permanence and causality	126
Overview	102	BOX 4.8 Activity suggestion: Grabbing attention of the lifespan	126
CHAPTER 4 Infancy: Physical, neurobiological, sensorimotor and cognitive development	103	The concept of object permanence	126
Chapter overview	104	The concept of causality	127
Behaviour in the first three months	104	Contemporary research on infants' causal concepts	128
Reflex behaviours	104	Personality, emotion and cognition	129
Crying	105	Gaining trust	129
Culture and caregivers' responses to crying	105	BOX 4.9 A case in point: Babies learn about blindfolds by being tricked	129
Soothing the crying infant	106	Developing a sense of personal control	130
Indigenous Australians' soothing practices	107	Learned helplessness	130
Sleeping	108	Developing self-efficacy	131
Lifespan changes in dreaming	109	Chapter summary	132
BOX 4.1 Indigenous insight: Dreamtime lullabies	109	For further interest	132
BOX 4.2 A case in point: Pleasures and dreams at 10 months of age	110	CHAPTER 5 Infancy: Social, emotional and personality development	133
Culture and infant sleep patterns	111	Chapter overview	134
BOX 4.3 How can you explain it? Cot death: The mystery killer	111	The roots of personality: Infant temperament	134
BOX 4.4 Optimising development: Reducing SIDS via neurocognition and learning	112	All babies are different	134
Solitary sleep versus communal social inclusion	112	BOX 5.1 Expressing individuality: Two different babies	135
Neurobiological and neurocognitive development in infancy	113	Patterns of temperament	136
Growth of the brain	114	Nature versus nurture: Genetic and neurocognitive influences on temperament	137
Neurogenesis and neural network connections	115	BOX 5.2 How can you explain it? Prickly Generation X?	138
Synapses: Generating and pruning	115	Variations in temperament over cultures and generations	139
Myelination	116	Indigenous Australian infants' temperaments	139
Physical growth during infancy	116	BOX 5.3 Indigenous insight: Breastfeeding	140
Cultural influences on physical growth: Aboriginal children	117	Seeking causes for cross-cultural differences in temperament: Genes versus childrearing	141
BOX 4.5 How can you explain it? Does owning a TV slow down the body's physical growth?	117	Indigenous parenting and personality	142
The growth of beauty	118	BOX 5.4 How can you explain it? Cultural paradoxes in early temperament	142
The development of motor skills	119	Lifespan perspectives on temperament	143
Nature versus nurture in motor skill development	119	Does early temperament predict later personality?	143
BOX 4.6 A case in point: The motor skills of a one-year-old	119	The goodness-of-fit hypothesis	144
Culture and skill: Aboriginal infants' motor development	120	Temperament, parenting and the socialisation process	145
		Emotional development in infancy	146
		Emotional self-regulation	146
		Attachment: The first intimate relationship	146

Critical periods in language growth	198	Conversational biases in experimental testing	223
The lifespan benefits of bilingualism	199	Vygotsky's sociocultural approach	223
Bilingualism among Indigenous Australians and New Zealanders	200	Memory development	224
BOX 6.12 Indigenous insight: Test yourself: Developmental stages	201	BOX 7.6 Applying psychology: Memories in court	225
Chapter summary	202	Strategic memorisation by preschoolers and older children	225
For further interest	203	BOX 7.7 A case in point: Effortless memory at 20 months and at age four	226
		Deliberate, voluntary memory	226
CHAPTER 7 Preschoolers: Physical, neurocognitive, emotional, intellectual and social development	204	BOX 7.8 Indigenous insight: The amazing memory skills of Aboriginal children	227
.....	Metamemory	228
Chapter overview	205	Emotional development during early childhood	228
Physical growth and motor skills during early childhood	205	Understanding emotion and desire	228
Physical growth	205	Self-esteem	229
Diet, growth and health	205	Social cognition and theory of mind	230
Motor skills	206	Culture and theory of mind	231
BOX 7.1 Indigenous insight: Bush tucker	206	Neurocognitive development and theory of mind	233
Neurocognitive development during the preschool period	207	BOX 7.9 A case in point: Culture and the understanding of what is on an adult's mind	233
Brain growth	208	Autism and theory of mind	233
Myelination of neural paths	209	Children with visual or hearing impairments	233
Lateralisation	209	Siblings and theory of mind	234
Deafness and brain lateralisation	210	BOX 7.10 A case in point: Gifts as boosts to theory of mind	234
Brain plasticity and critical periods for language	210	Social play	235
Cognitive development: Preoperational thinking	211	Developmental changes in social play	235
Preoperational concepts of biology and physics	211	Cultural and evolutionary issues in the development of play	235
BOX 7.2 A case in point: Animistic thinking	211	Pretend play as a developmental optimiser	236
Preschool logic	212	Cognition, conservation and pretend play	237
The problem of conservation	212	Creativity and cognitive flexibility	237
BOX 7.3 Piaget's realism and artificialism	213	Pretend play and theory of mind	238
Conservation of distance	213	Pretend play, emotional self-regulation and emotional understanding	238
Conservation of number	213	Pretend play and negotiation skills	239
Conservation of substance	214	Parents and play	239
Conservation of fluid quantity	214	Chapter summary	240
The development of conservation understanding	214	For further interest	240
BOX 7.4 Activity suggestion: Joking with conservation	215	In a nutshell: Milestones of development from age two to age six	241
Numerical and mathematical concepts	216		
Classification	216	Part 4 Middle childhood—age six to age 12	242
Seriation	217
Transitive inference	217	Overview	242
Numeracy	218		
Piaget's theory: Mechanisms of developmental change	218	CHAPTER 8 Middle Childhood: Social, personality and sex-role development	243
Equilibration	218
Cognitive conflict	219	Chapter overview	244
Responding to Piaget: Contemporary extensions and alternatives	219	Parental influences on social and personality development	244
Social influences on cognitive development: Peer discussion and conflict	219	Parents' childrearing styles and philosophies	245
Culture, peer debate and cognitive development	220	BOX 8.1 A case in point: One six-year-old adjusts to the novelty of school	245
Learning to interpret conserving transformations	221		
Lessons from bilingual children	222		
BOX 7.5 Indigenous insight: Thinking in two languages at once	222		

Reasoning or punishment? Parents' disciplinary tactics	246	Justice concepts	276
Optimally effective parenting	247	BOX 8.8 Indigenous insight: Cultural contrasts in justice views	277
Cultural variations in parenting	248	Chapter summary	278
BOX 8.2 Indigenous insights: Childrearing in remote Indigenous Australia	249	For further interest	279
Siblings and psychological development	249	CHAPTER 9 Middle Childhood: Physical, neurobiological, cognitive and emotional development in the context of schooling	280
Sibling rivalry and differential parenting	250	
Siblings as tutors	251	Chapter overview	281
Siblings and social cognition	251	Health and physical growth during middle childhood	281
'Catching' a theory of mind from siblings	251	Physical growth trends	281
The only child	252	Problematic growth: Obesity and malnutrition	282
Personality and the self-concept	252	BOX 9.1 A case in point: Counting calories at age nine	283
Industry versus inferiority	252	BOX 9.2 Lessons from culture: If only I was plump!	284
The development of self-esteem	253	Television and weight problems	284
Peers as developmental influences	254	Weight, diet and nutrition in cross-cultural perspective	284
Measuring a child's status in the peer group: The sociometric technique	254	Optimising physical growth: Diet and exercise	285
BOX 8.3 A case in point: The pain of social exclusion	254	Health, illness and health understanding	285
Are sociometric classifications reliable?	255	Neurocognitive development in middle childhood	286
The correlates of peer acceptance and rejection	255	Myelination	286
Loneliness versus unpopularity	255	BOX 9.3 Indigenous insight: Shopping for health	287
Compensating for peer group rejection: Mixed-age peer groups and mutual friendships	256	Grey matter changes	288
The development of sex roles	256	Neurocognitive activity in sleep and wakefulness	288
The socialisation of children into sex roles	257	Lateralisation and the corpus callosum	288
Do Millennial boys love dolls?	258	The development of motor and athletic skills	289
BOX 8.4 Activity suggestion: Conducting an inventory of a child's bedroom	258	Emotional development	289
Television and sex-hyping	259	The development of emotional competence	290
The cognitive development of gender understanding	259	Anger and anger management	290
Ages and stages of gender constancy understanding	261	Fear and anxiety	291
BOX 8.5 A case in point: Why can't a woman be just like a man?	262	BOX 9.4 Do fears grow as the child does?	292
The development of androgyny	262	Cognitive development in the context of schooling	293
Theories of gender-role development	264	Executive functioning skills and cognitive planning	293
Freud's psychoanalytic theory	264	Developmental changes in attention during middle childhood	293
Social learning theory	265	BOX 9.5 Activity suggestion: Brain teasers	294
Kohlberg's cognitive-developmental theory	267	Selective attention	294
Gender schema theory	267	Thinking flexibly and strategically	295
Comparing theories of sex-role development	268	Metacognition: Children's knowledge about thinking	296
Culture and social relationships	268	Memory and problem solving	296
Moral development	269	Executive functioning and cognitive flexibility	297
The development of moral behaviour	269	BOX 9.6 Activity suggestion: Sorting cards	297
BOX 8.6 A pause for thought: Do the best minds produce the strongest consciences?	270	Creativity and cognitive flexibility	298
The development of moral understanding during childhood	270	Evaluative thinking: Reflection versus impulsivity	299
BOX 8.7 A case in point: Louise and Taffy in awe of adults	271	Developing literacy	299
Piaget's theory in the 21st century	272	Developing reading readiness: Awareness of books and phonology	299
Social conventions versus moral rules	273	BOX 9.7 Activity suggestion: How do you hold a book?	301
The positive side of morality	274	Novice readers	301
Helpfulness versus bystander apathy	274	BOX 9.8 A case in point: Learning the logic of words	302
Infants' altruistic helpfulness	275	Reading for meaning	302
Fairness and distributive justice	275	The development of reading in Aboriginal children	302
		The motivation to succeed academically	304

The pendulum problem: Hypotheses and possibilities	352	Developing an ethnic identity	377
The beam balance problem: Proportionality and reversibility	352	BOX 11.11 Activity suggestion: Test your multicultural IQ	378
The horizontal plane: Higher-order abstract concepts and the logic of propositions	353	Identity development in Aboriginal Australian adolescents	379
When do formal operations develop? Revisions of Piaget's theory	354	BOX 11.12 A case in point: A charming age in Samoa	379
Schooling and formal operations	355	The benefits of an Indigenous Australian ethnic identity	380
BOX 11.3 A case in point: Frustration in a physics class	356	Identity development in New Zealand Maori adolescents	382
Developmental divergence in peak abilities	356	BOX 11.13 A case in point: Identity in Maori women in New Zealand	382
Cognitive specialisation	357	Chapter summary	383
Assessing Piagetian formal operations in the 21st century	358	For further interest	383
Are contemporary teenagers illogical? A cohort-linked decline in formal-operational reasoning	358	CHAPTER 12 Adolescence: Social, personality and relationship development	385
Twenty-first century neurocognition and Piaget's theory	358	Chapter overview	386
Adolescent cognition in everyday life	359	Becoming independent of parents	386
BOX 11.4 Activity suggestion: Test your own ingenuity. What do you think?	360	Gaining independence at home	386
Thinking logically about health and illness	360	BOX 12.1 Growth towards independence	387
Thinking about politics and economics	361	Emerging into adulthood: Emotional and social transitions	389
Thinking about the mind: Second-order false belief understanding	362	The psychoanalytic model: Freud and Erikson	389
Social cognition and the transition to formal-operational thought	363	Emancipation through dialogue	390
The imaginary-audience syndrome	363	Cultural variations in the process of becoming independent	391
BOX 11.5 Strutting and fretting on an imaginary stage	364	Attachment to parents and peers	392
Health, dating and the imaginary audience	364	Working models of attachment	392
Formal operations and sexual risk-taking	364	Parent-adolescent conflict and communication	393
Moral development during adolescence	365	Family negotiation strategies	394
BOX 11.6 Using science: Social media and the imaginary audience	366	Learning to negotiate at home	394
Kohlberg's theory	366	Family conflict and adolescent self-esteem	395
Ages and stages of moral growth	368	Family communication, conflict and identity exploration	395
A critique of Kohlberg's theory	368	Parenting styles and discipline strategies	396
Actions speak louder than words: Moral reasoning and behaviour	369	Parenting styles and adolescent outcomes	397
Culture, collectivism and the morality of care	370	Single parents, step-parents and adolescent adjustment	397
Gender and moral reasoning	372	Culture and the parenting of teenagers	398
BOX 11.7 Expressing individuality: Gender differences in the logic of morality	372	Criminal activity and juvenile delinquency	399
Personality development: The identity crisis	372	Culture, income and juvenile delinquency	400
BOX 11.8 Indigenous insight: Identity crisis resolution as a dialectical balance	374	Family violence	401
BOX 11.9 A pause for thought: Can you assess identity?	375	Adolescents and substance abuse	402
Identity statuses	375	Cigarette smoking	402
BOX 11.10 A case in point: Identity exploration through social comparison	376	Drinking alcohol	403
Consequences of identity growth for personality and adjustment	376	BOX 12.2 How can you explain it? Does smoking damage the brain?	403
Cultural variations in personality and identity development	377	Other drugs	404
		Adolescent suicide	404
		Culture and youth suicide	405
		Developmental changes in suicide risk	405
		Indigenous Australians	406
		The positive developmental influences of family and friends	407
		Parent-peer cross-pressures	407

BOX 12.3 Parent–peer pressures and the dilemmas of a school dance	408	BOX 13.4 Activity suggestion: Attachment styles of young adults	432
Cross-cultural comparisons of adolescents' parent–peer relations	408	Falling out of love	432
BOX 12.4 Fun with peers at Helensville, New Zealand	409	Measuring adult attachment	433
Adolescent friendship	409	Adult attachment, culture and relationships with parents	433
Social cognition and the understanding of friendship	410	Attachments to love and work	434
The problematic side of adolescent friendship: Bullying and relational aggression	410	The first career development transition: Entering the economy	435
BOX 12.5 The horror of being 'hated'	411	Graduating into employment or unemployment	435
Friendship versus solitude in adolescent adjustment	411	Youth economic inactivity: Psychological and developmental consequences	436
Adolescent couple relationships in early dating	412	Indigenous Australian and New Zealand adults and economic inactivity	436
The dating game	412	Career goals, life goals and identity development	437
Culture, dating and teen marriage	412	Life goals and career goals	438
BOX 12.6 The history of dating in Australia	413	The identity crisis and forging an identity at work	440
The development of gender roles and androgyny in adolescence	414	Career exploration and identity search	440
The adolescent peer group	415	The first stages of career development	441
BOX 12.7 Peer pressure and dating	415	Trial commitment	441
Chapter summary	417	Adjusting to the job	441
For further interest	418	Marriage, culture and psychological growth	442
In a nutshell: Milestones of development in adolescence	419	Cohabiting versus legal marriage	443
		The domestic division of labour	443
		BOX 13.5 Indigenous insight: An Aboriginal arranged marriage	443
		Same-sex couplehood	445
		What predicts divorce?	445
		The transition to parenthood	446
		The advantages and disadvantages of parenthood	446
		Becoming a new parent	447
		The later challenges of parenthood	448
		BOX 13.6 The delights of fatherhood	449
		Chapter summary	449
		For further interest	449
Part 6 Adulthood	420	CHAPTER 14 Middle Adulthood: Physical, cognitive, social and personality growth	450
Overview	420	Chapter overview	451
CHAPTER 13 Early Adulthood: Physical, cognitive, social and personality development	421	Physical and motor development in middle adulthood	451
Chapter overview	422	Neurocognitive plasticity	452
Life events and emergent adulthood	422	BOX 14.1 A pause for thought: Can playing golf change your brain?	453
Neurocognitive growth and functioning during early adulthood	423	Adult brain growth	453
Neurocognition and adult competencies	424	Nurturing the development of the adult brain	453
Neurocognitive growth spurts	424	Enriched experience and adult brain growth	454
Adult brain plasticity	424	Do men's and women's adult brains develop differently?	454
Pathways to relationship maturity: Falling in love	425	The gain–loss dialectic in adult neurocognition	455
What is romantic love?	425	The psychology of adult gender differences	455
The many splendours of early romantic love	427	Personality development in adulthood	456
BOX 13.1 Media watch: The humour of love	427	Lifespan personality growth	456
BOX 13.2 A case in point: The morning after the ball	428	Developing the need to be needed: Generativity versus stagnation	457
Lifespan developmental theories of love	428	Lifespan changes in androgyny	458
Equitable love: The development from passion to the keeping of accounts	428	Mature adults' cognitive development	458
BOX 13.3 How can you explain it? The rewards of romance	429		
Dialectical mature love	430		
Erikson's theory of personality growth through intimacy	430		
Adult attachment style and relationships	431		
The influence of attachment style on the development of love	431		

Marriage development in middle adulthood	460	CHAPTER 15 Late Adulthood: Physical, cognitive, social and personality development	489
The U-shaped curve of marital happiness	460	Chapter overview	490
Marital disenchantment	461	The prime of life	490
Marital re-enchantment: Why are old marriages happier than young ones?	462	Life satisfaction at 50	491
BOX 14.2 How can you explain it? Marital disenchantment	462	BOX 15.1 A case in point: 'The end'	491
BOX 14.3 A case in point: A marriage of minds	462	Turning points and transition events of late middle age	492
Are married people happier than singles?	463	BOX 15.2 Indigenous insight: Senior Aboriginal women's spiritual responsibilities	492
Cross-cultural studies of the development of marriage	463	Psychological adjustment to life transitions	492
Traditional Indigenous Australian marriage	463	Cultural expectations and the social clock	493
BOX 14.4 Indigenous insight: When 'legal marriage' was illegal	464	Intellectual and cognitive development in late middle age	494
Traditional Japanese marriage	465	Schaie's stage theory	494
Traditional Chinese marriage	466	Dialectical thinking	495
Theories of marriage development over the adult lifespan	466	Balancing cognitive gains against losses: Mature creativity	496
Lifespan sexuality and sexual satisfaction	467	The development of faith, religion and spirituality	496
Stresses of parenthood	467	Personality development in late middle age:	
Marital communication and conflict management	468	The generativity crisis	497
Adult personality development in marriage	469	Age, generativity and creative potential	498
Love and work	469	BOX 15.3 Expressing individuality: Elderly tall poppies	500
Working at home: Family roles and adults' household work	469	Biological changes in late middle age	500
Culture and family roles	470	Menopause and female physiology	500
Androgyny and household work	471	BOX 15.4 Lessons from culture: Menopause in Mexico	501

Part 7 Old age and the end of the lifespan

515

Overview 515

CHAPTER 16 Old Age: Physical, neurobiological, sensorimotor and cognitive development 516

Chapter overview 517

What age is old age? 517

The young-old versus the old-old 518

Ageism and fear of ageing 519

Personal optimism about ageing 520

BOX 16.1 A case in point: How does it feel to be 70 years old? 520

Cross-cultural perspectives on ageing 521

Old age in Western versus non-Western cultures 521

Age and the sociocultural environment 522

BOX 16.2 Indigenous insight: An artistic seniority 522

BOX 16.3 Lessons from culture: Age and etiquette 524

The interaction of biology and culture in human ageing 525

Cultural environments and biological ageing 525

Health attitudes, preventative health practices and physiological ageing 526

The biological ageing process 526

Ageing of the hair and skin 527

Ageing of internal physiology 527

Hormonal changes 527

Ageing of the bones and teeth 528

Ageing of the sense organs and perception 528

The psychological impact of biological ageing 529

Neurocognitive ageing 529

BOX 16.4 Test yourself: Are you health-conscious or a victim of ageism? 529

BOX 16.5 Erasing the effects of neurocognitive ageing by playing video games 530

Theories of biological ageing 531

Disease theories 531

Homeostasis and the compression of morbidity 531

Cellular theories of ageing 531

Environmental insult theories of ageing 532

Optimising health and fitness in old age 532

Diet and healthy ageing 533

BOX 16.6 A case in point: Two different women face ageing in France 533

Exercise and health in old age 534

A healthy lifestyle: Avoiding avoidable risks 534

Ageing and sport 535

The processes of cognitive ageing: Memory 536

Lifespan changes in memory performance 536

Strategic compensation: Optimising memory performance in old age 536

BOX 16.7 A case in point: Absent-minded professors 536

Motivation, lifestyle and memory 538

Metamemory, self-efficacy and personal control 538

Autobiographical memory 539

BOX 16.8 Activity suggestion: Who remembers what? 539

Memory and personality: Life review and reminiscence 540

Life review and psychological wellbeing 541

The processes of cognitive ageing: Intelligence 541

BOX 16.9 A case in point: Taking a PhD exam at 80 541

Age and IQ scores: A critical look at the scientific evidence 542

One IQ or many? The different kinds of adult intelligence 544

Fluid versus crystallised intelligence 545

Speeded versus carefully considered performance 545

Creative versus academic intelligence 545

Successful cognitive ageing 546

BOX 16.10 Indigenous insight: The creativity of a senior Anmatyerre custodian of the land 546

Wisdom 547

Culture and wisdom 548

BOX 16.11 Indigenous insight: A wise elder 549

Eastern and Western models of wisdom: A dialectical balance 550

BOX 16.12 Do you have a taste for Eastern or Western wisdom? 550

Cultivating wisdom through lifelong learning 551

Chapter summary 551

For further interest 552

CHAPTER 17 Old Age: Social, emotional and personality development 553

Chapter overview 554

Successful social ageing 554

Social roles and relationships in old age 554

Is the rocking chair the way to go? 555

Disengagement theory 555

Three postulates of disengagement theory 555

Thinking critically about disengagement theory 556

BOX 17.1 Ask yourself: A case of disengagement 557

Culture and disengagement 557

BOX 17.2 A case in point: The continued pursuit of a committed life 557

Activity theory 558

Do people disengage or remain active in old age? 559

Should old people disengage or stay active? 560

Longitudinal research evidence on social ageing 561

Personality continuity theory 562

Integrated adults 563

Less-than-optimal social ageing 563

BOX 17.3 A case in point: Integrated elderly adopt life patterns to suit earlier personalities 563

The British longitudinal personality study 564

Socioemotional selectivity theory 564

Older marriages and socioemotional selectivity theory 565

Comparing disengagement, activity, continuity and selectivity theories	566	BOX 18.4 Activity suggestion: How long will you live?	589
Conflict-resolution strategies in mature relationships	566	Development of knowledge, beliefs and feelings about death over the lifespan	589
Cross-cultural studies of social ageing	567	Children's beliefs about death	589
Personality, culture and choices of where and how to live	567	BOX 18.5 Activity suggestion: Death quiz	590
Culture, gender and residential choices	568	Developmental changes in children's death understanding and death anxiety	591
BOX 17.4 Lessons from culture: Residential care in China	568	BOX 18.6 A pause for thought: What does a mature understanding of death consist of?	592
The older person and the internet	569	Death understanding in adolescence and adulthood	593
The developmental benefits of mixed-age social contact	570	BOX 18.7 A case in point: Thoughts about death from toddlerhood to adolescence	594
Personality and adjustment in old age	571	Death anxiety in adolescence and adulthood	594
The development of the self-concept in old age	571	BOX 18.8 Activity suggestion: Test your own death anxiety	595
BOX 17.5 Test yourself: How does your age self-concept measure up?	572	Death anxiety in old age	595
Motivation, personality and personal control	572	The influence of close encounters with death	597
BOX 17.6 How do you explain it? A life-or-death experiment in a nursing home	573	The process of dying	597
Aged health care and personal control	573	Stages in adjustment to death	598
Stress and coping	574	BOX 18.9 A case in point: Dying courageously	599
Coping with stress in mature adulthood	574	A critique of Kübler-Ross' theory	600
Developmental gains in coping skills during old age	575	Choice and personal control	601
Integrity: The crisis over wisdom versus despair	576	The rights of the dying and living wills	601
Sexuality in old age	576	The hospice	602
BOX 17.7 Is sex in old age a joke?	577	Cultural variations in dying and the acceptance of death	603
Chapter summary	578	Indigenous Australians' and New Zealanders' death attitudes and practices	603
For further interest	579	BOX 18.10 Indigenous insight: Cultural cooperation in terminal care	603
CHAPTER 18 The End of the Lifespan: Death, dying and bereavement	580	BOX 18.11 Lessons from culture: Wishes fulfilled	604
Chapter overview	581	Death and dying in cross-cultural perspective	604
Death as a lifespan developmental process	581	Bereavement	604
Death through the lifespan	582	The management of grief	605
Longevity in the world today	582	Widows and widowers	606
Centenarians and the ageing population	583	BOX 18.12 A case in point: Staying involved after death	606
How to live to be 100	583	The immediate aftermath of spousal bereavement	606
BOX 18.1 A case in point: Extreme longevity	583	Identity development after the widowhood transition	607
The tragedy of Indigenous Australians' curtailed longevity	584	Positive psychological development during widowed life	608
Promoting health and longevity in Indigenous communities	584	Widowhood and culture	609
BOX 18.2 How can you explain it? Indigenous versus non-Indigenous Australians' longevity	585	Gender, bereavement, divorce and individuality	609
The psychological impact of population longevity	586	Chapter summary	610
The timing of death and lifespan psychological development	587	For further interest	610
BOX 18.3 A pause for thought: How psychology's causal influence on longevity transcends methodology	587	In a nutshell: The whole lifespan	612
Death's natural causes	587	GLOSSARY	613
Social influences on longevity	588	REFERENCES	630
