What is the Global Scale of English?

The Global Scale of English (GSE) is the first truly global English language standard, allowing teachers to measure learner progress more accurately and more easily.

Based on research involving over 6,000 teachers from more than 50 countries, it extends the Can Do statements of the Common European Framework of Reference (CEFR) to support teachers of different learner profiles: Adults learning General English, Academic English and Business English, and Young Learners.

The numerical scale from 10 to 90 enables teachers and learners to understand more about language proficiency *within* a CEFR level.

What's great about the GSE?

- It's great for **institutions, organizations** and **ministries of education** looking to improve or develop their curriculum, or to select the most suitable courses and assessments.
- It's great for **teachers** and **trainee teachers** looking to adapt content to support mixed ability classes or to find resources at the right level of their students.
- It's great for **learners** and **parents** looking to see progress within a level, what needs to be achieved and staying motivated.

What is the GSE Teacher Toolkit?

The GSE Teacher Toolkit is a free online resource that has all of the learning objectives, vocabulary and grammar within the GSE, and so much more. You can:

- search by language skill, topic and job skills.
- find audio files to help with pronunciation.
- find course and assessment recommendations.
- find perfect partners to complement your materials.
- check the level of a piece of text to use in class with the Text Analyzer.

Over 250,000 teachers from around the world already use the GSE Teacher Toolkit, for example, to find materials, identify goals for a class or course, or look for recommendations.

//

When you're faced with the challenge of having multiple levels of students in one classroom, having the Global Scale of English is a really nice rubric for us as teachers to check and assess if we're covering everything needed for that level, making sure we don't leave anything out."

Elizabeth MacDonald, Adjunct Instructor, ESL, Sacred Heart University, Connecticut, USA

Routines and classroom management for very young learners

Our job is to keep young learners, especially those new to the classroom and unfamiliar with English, comfortable and safe in a friendly environment, and we can do this by establishing routines.

- Use English for greetings, praise, instructions and explanations. The children will soon begin to expect it and they will begin to understand what you are saying.
- Greet each child by name and encourage your students to use each other's names to encourage friendly communication.
- Make circle time the start of every lesson and use a puppet to help present the target language, greeting the children by name and have them answer back.
- Let the children call out responses together so no one worries about not saying things correctly. As their confidence builds, they will want to speak by themselves.
- Always accept approximations of words and phrases. Continue to say the words as they should and gradually the students will self-correct.
- Give your students time to discover pages and images they like in the books you are using. Leave time to allow them to find the correct page and focus on that page.
- Singing, games and miming are ways in which students will start to freely use and show they understand the target language.
- Craftwork involves four stages: preparation, production, playing and tidying up. Encourage your students to learn from each other.
- Time your lessons so that the students don't have to leave in a rush. It takes them a while to collect up their things and find their bags and coats.
- Just as you greeted each child by name when they came in, say goodbye to them individually as they leave.

"Before students can see themselves in a global context they should get to know themselves as individuals."

How to teach students to be global citizens

As teachers, we all want our students to help make the world a better place, and we can foster this in the classroom by focusing on global citizenship.

Global citizenship encourages tolerance and understands that people have different lifestyles, appearances, cultures and routines, but shares common values and responsibilities with them. And we can develop this in our students while helping them learn English.

Before students can see themselves in a global context, they should get to know themselves as individuals who are part of their immediate communities. Encourage students to think about something personal but also to look further: what kinds of home do they see in their communities? What makes a house a home to them? What about people working in their communities – what jobs do they do, and how do they make an impact?

Once students know something, they can put their knowledge into action. Teachers can foster this by encouraging good habits, such as throwing litter in a bin. As they grow older, we can help learners look more deeply into why they're so important, for instance making students aware about how their civic responsibility has a real environmental impact.

Assessment for learning in times of online teaching

Assessment for learning is one of the main pillars of effective English language teaching and it can be applied online as well as in the classroom. We do it to know whether our students have achieved the objectives pursued, but it's more than testing.

Effective teaching engages students in many ways. It should be hands-on, interactive, and generative by nature, encouraging students to critique, construct, and produce knowledge through meaningful involvement. Students teach each other; they develop new knowledge with teachers as co-learners. When teachers apply the principles of assessment for learning, they continuously analyze and synthesize what their students are doing, and so are well placed to decide when to intervene. And we should continue to do this online. As teachers, we must keep students' interaction and generative nature alive, so they can continue to get involved, interact, critique, construct, and produce in a meaningful, proactive way.

For effective assessment for learning online, we should go beyond having online tests and determine our students' achievement by observing, interacting and monitoring. We should ask them for assignments that require research, reading, analyzing, and synthesizing, presenting, expressing opinions, and even establishing conclusions. All this can be done online and still be done independently and engender creativity and socialization.

"Students with a coding mindset approach problem solving like developers."

Preparing young learners for the unpredictable

Young learners are preparing for a future of work that we can't even imagine today. Technology, climate change and an unpredictable work environment means they will have to be adaptable, creative, critical thinkers. Most importantly, they will need to have the ability to solve problems and work well with others.

As teachers, it's down to us to help them develop these 21st century skills at an early age. And being such a technology-driven society, there is an onus on developing STEAM (Science, Technology, Engineering, Art and Math) competencies. This is where a coding mindset comes into play.

Students with a coding mindset approach problem-solving like developers. Not only are they perseverant, organized and resilient, they define the problem, break it up into small parts, plan ahead and think about possible solutions and issues they could face, look for the most efficient solution, and reflect on their progress.

If you are keen to help your young learner students to develop a coding mindset, but aren't sure where to start, there are a number of activities that are easy to prepare and can be adapted to different ages, levels and classrooms. These include sequencing activities, activities using patterns, listen and do, and if-then activities.

†CBeebies, Pre-coding, STEAM, Social & Emotional Development

"Learners... will need essential skills such as creativity, collaboration and critical thinking."

How do you encourage your students to use their imaginations?

Creativity is one of the most important future skills – and also one of the most misunderstood.

Contrary to popular belief, creativity is not just about coming up with ideas. It's also about evaluating and improving existing ones, and brainstorming multiple solutions to problems. What's more, it includes understanding real-world limits when developing new ideas and then elaborating on those ideas and outlining the smaller steps which will make them possible. Traditionally, academic success was measured on the ability to recall and repeat information – meaning that creativity was often not given the space it deserved in education.

But today, educational systems are changing to meet the future needs of learners who will need essential skills such as creativity, collaboration and critical thinking.

There are lots of ways we can encourage students to use their art and design skills in the classroom. One of the most effective is to use the course materials you are covering to generate ideas for presentations. This will further engage your students and develop digital literacy, as they will need to identify facts and form opinions about what they are reading.

Language doesn't always have to be presented and practiced in the same way and vocabulary doesn't always have to be written in a list. Allowing students to develop their own systems and categories for recording language is another positive step towards both creativity and critical thinking.

"Big Questions are open-ended... they are meant to be investigated, argued and looked at from different points of view."

Asking *Big Questions* makes a difference

Give meaning to your lessons with a Big Question.

In a class, students were reporting the progress of plants they were growing. They analyzed the factors behind the growth of some of their plants and behind the fact some of the plants did not make it through the weekend. Then they discussed photosynthesis and were talking incessantly, raising their hands, practically jumping off their seats. They interpreted charts and drew conclusions.

All the teacher did was give meaning to her lesson with a Big Question. The lesson was relevant and meaningful, and though children struggled with words, the cascade of ideas and opinions they wanted to share was unstoppable. What a difference a Big Question had made.

Big Questions are open-ended; have no simple right answer and no yes/no answers. They are meant to be investigated, argued and looked at from different points of view.

A Big Question makes you think; it makes you bring your previous experience and knowledge to the discussion. A Big Question may not have a unique, correct answer, but any answer that is the result of a collective construction of knowledge will have fulfilled its purpose. We will always have something personal and relevant to say in response to a good Big Question.

A Big Question makes me look for evidence to support my ideas. And that kind of depth of knowledge and rigorous thinking is what we as teachers should strive for in any classroom.

"Anyone who has spent time with a young child knows about inquiry-based learning."

Questions in the classroom

Anyone who has spent time with a young child knows about inquiry-based learning.

It's easy to feel overwhelmed when you have a class full of children, all with different interests and questions. So, how can we handle questions in the classroom?

Let's look at how a lesson on adjectives of description looks, following the inquiry-based approach.

Ask the question 'How are we all different?' and ask students to think about people they know. Then ask them to think about other people: the person who drives the school bus, or serves them in the supermarket.

Then build on that: who do they like being with and why? Why not? This can be done using quite basic language; 'I like her. She's good.'

Then we can present new adjectives like 'grumpy' or 'chatty'. Do they know someone chatty? What do they chat about? And someone grumpy? Why might they be grumpy?

In *Now I Know!* we have a story about a neighbor who seems grumpy but is actually hard of hearing.

Our language goals are the adjectives, but children are thinking about people, analyzing and reflecting. They are also addressing important values such as compassion.

It's satisfying to make students aware of what they've learned and bring the topic to a conclusion, with a project or a presentation. We also want them to know that we can add to our thoughts or change our minds. The topic is still open to inquiries.

"The things we remember are things that we actively learned and used."

The three stages of learning

We've all learned things that we've subsequently forgotten. Just think about all the facts and figures you were exposed to during your education.

However, there are pieces of information that we hold on to. But why do we remember certain things and not others? The things we remember are things that we actively learned and used.

There are three stages of active learning: cognitive, associative and autonomous.

In the cognitive stage, we give our students new information. This might be vocabulary sets or a grammar structure, with a supporting explanation. Our role is to explain the information clearly and make sure that students understand the information fully.

In the associative stage, we show our students how to integrate this new information with what they already know, building associations and encouraging them to make predictions.

The final stage is autonomous learning, where learners set their own goals and choose their own learning activities, using the resources at their disposal (including you, the teacher) to deepen their knowledge.

If your students are able to successfully demonstrate their active learning abilities ahead of the exam, it builds their confidence and reduces their anxiety.

Teaching online: the first steps

In an online lesson, teacher talk is the same as in the physical classroom. One issue with online learning, is that rapport and engagement can be harder to achieve. For that reason, it's a good idea to keep teacher talk to a minimum.

Most platforms should have an interactive whiteboard. You can use this and share your screen via your platform so students can see it. You can use the whiteboard for exactly the same things as you do in the classroom.

One real benefit of online learning is the chat box. If your students are able to write in English, they can all type an answer into the chat box. This allows you to assess the understanding and ability of all students and not just one or two. It also ensures that learners are participating in the lessons, and engaging with the material. With smaller groups, you might ask learners to share their ideas on the whiteboard. You also have the option to nominate a student to speak using their microphone.

Breakout rooms are a fantastic way to enable pair and group work in an online lesson. You can also hold pair work activities without breakout rooms, but the students not talking will need to be given a task (assessing, listening for key vocab, agreeing, disagreeing etc.) which they can complete in the chatbox. If you don't have the benefit of breakout rooms, another option is for speaking practice to be done outside the lesson for homework.

Download the complete guide to teaching online via *Primary Academy*.

"Modern learners need to develop... skills which will help them become fully rounded citizens of the global community."

Soft skills (also called 21st century skills and transferable skills) are becoming increasingly important for students who face a world that is always changing, where the future is uncertain. Modern learners need to develop not just English language skills, grammar and vocabulary, but also skills which will help them become fully rounded citizens of the global community.

The *Set for Life* lessons equip students with the soft skills they need for life beyond the classroom.

"The real challenge is that those 5,000+ new words are not very frequent."

Overcoming the challenge of learning new words

Students learning new words in English generally progress steadily up until the pre-intermediate and intermediate level. But after that, they start to struggle.

This is because there's a big difference between the volume of the vocabulary that intermediate students and upper-intermediate students need to know. Intermediate (B1/B2 level) students need to know about 2,500 words, while upper-intermediate (B2/C1 level) students need to know about 7,500-9,000 words.

The real challenge is that those 5,000+ new words are not very frequent. As a consequence, students don't encounter them very often. This makes it difficult to recall them and make the leap from one level to the next. To help your students:

- Focus on the most important words. Always teach appropriate words for the levels your students are currently at.
- Provide memorable first encounters. You never get a second chance to make a first impression. So, ensure that your students' first encounter with a new word is as memorable as possible.
- Teach effective word-learning strategies. Provide your students with useful tools, tactics and resources so that they can learn new words outside the classroom, too.
- Organize repeat encounters. Vocabulary works on a use it or lose it basis, so make sure your students encounter the vocabulary you want them to learn again and again.

"Well chosen videos can be fun, motivating and educational."

How to choose the right video for your learners

There's nothing quite like a video to grab a teenager's attention in the classroom. Well chosen videos can be fun, motivating and educational - and are often a welcome break from more traditional classroom activities.

It's important to select your video material carefully, considering the age, language level and interests of your students. Younger learners tend to respond to cartoon-like videos with stories or fun characters, while teenagers and adult learners are more likely to be interested in documentary style films, humorous videos, or content that relates to their interests or work.

Of course, it's also important to consider how advanced your learners are when selecting content - if the video content is too complex your learners will find it hard to understand and might lose motivation and interest. Conversely, if it's too easy, they'll also get bored.

You can watch a video training series by Amanda Davies where she shares her practical tips and ideas on using all types of GoGetter videos in class.

High Note

It's good to be ambitious

When upper secondary students have ambitious goals, they need a course that equips them with the language and exam skills alongside the life and career competencies that are indispensable to succeed in their future lives.

"When under pressure or excited, teenagers are literally not in their right minds."

Teens don't always make the best decisions

When it comes to it, teenagers are well known for making absolutely terrible decisions. It's almost as if all sense goes out the window. In fact, when under pressure or excited, teenagers are literally not in their right minds – especially when they're trying to impress or be accepted by peers.

Adolescence is a time when the brain is developing very fast. Because the pre-frontal cortex is not fully formed until the mid-twenties, it's much harder for teenagers to anticipate the consequences of their choices, resist peer pressure, delay gratification and resist impulses. None of which makes for great decision-making.

You can, however, help teenagers make better decisions:

- Practise in a stress-free environment. By discussing topics and possible scenarios in class, we can help teenagers consider, anticipate and even rehearse decisions they may have to make. This will help them identify the choices they really want to make later on.
- Develop awareness about what's happening in their brains so they recognize the impulse to do something that at some level they know isn't in their best interests. Teach them to 'count to ten', or remove themselves from a situation to cool down, or phone a trusted friend for advice—or simply consider what this person would be likely to advise them.
- Encourage self-reflection, the value of learning from experience: learning to make good decisions is a process, and involves making bad ones along the way.

"Learning strategies accelerate standard academic language learning."

Why teach learning strategies?

Learning strategies accelerate standard academic language learning for all students more effectively and efficiently.

Learning strategies are techniques for understanding, remembering, and using information and skills to master academic language and content simultaneously, as they do in *New Keystone*. Learning strategy induction can help students by:

- showing them techniques for how to learn,
- developing their independence as learners,
- increasing their academic motivation, developing their awareness of their own thinking and learning processes.

Research has shown that when students develop metacognition, the awareness of the learning process and strategies that lead to success, they are more likely to plan how to proceed with a learning task, monitor their own performance, find solutions to problems encountered, and evaluate themselves upon task completion.

All kinds of fiction, poetry, and informational texts provide students with models of academic and literary language. However, to make full use of these models, students need to comprehend what they read. Reading strategies presented in *New Keystone* provide detailed instructions on how to apply the strategy to the text they are about to read.

Anna Uhl Chamot

Choose *New Keystone* if you want to:

Focus on comprehension, reading strategies and fluency in an intensive program.

Use scaffolded instruction combined with an explicit focus on language development.

Integrate language development and content, aligned to the Common Core State Standards.

Support your students to develop transferable academic skills.

Skills for the future

Future's curriculum ensures skills and competencies are fully and seamlessly integrated in every lesson of the program, equipping learners with higher order skills to help them achieve their personal, professional, and educational goals.

Functioning level descriptors are organized into three modalities: interpretive, productive, and interactive. *Future* develops all three at every level.

- **Interpretive:** Content-rich listening and reading activities develop skills to understand, process, and interpret written and oral language delivered in a variety of contexts and genres.
- **Productive:** Engaging speaking and writing activities at each level challenge learners to produce meaningful spoken and written language in a variety of contexts, developing their productive skills.
- **Interactive:** Future offers an abundance of interactive activities that allow learners to engage in conversations, discussions, and exchanges of ideas, as well as gathering and summarizing information.

Standards are incorporated into the curriculum at every level, providing a foundation for academic rigor.

"The process of producing the final work is where you can see your students' critical thinking skills in action."

Assessing critical thinking

There are some common myths related to critical thinking and assessment. Many people believe that it's impossible to assess critical thinking, especially in classes where language is limited. The key to success is crafting tasks and rubrics that allow you to separate language skills and cognitive skills. After all, a low language level doesn't necessarily reflect your students' ability to think critically.

To measure critical thinking, we first have to consider two types of assessment—formal and informal. Formal assessments tend to happen at the end of a task, lesson or skill-building activity, and usually focus on the work the student has produced. Then, we have informal assessments. Those are the assessments that involve on-the-spot interactions.

There is a common misconception that assessment should only focus on the final work that your students produce. The final 'product' is undeniably important, and often an ideal measure of linguistic abilities. But the process of producing the final work is where you can see your students' critical thinking skills in action.

When designing rubrics to measure both language and critical thinking, make sure that you only focus on one at a time—either language or critical thinking. Keeping these different skills in mind will help you to differentiate language skills and critical thinking skills, and evaluate them separately, when it comes to formal assessment.

Roadmap

The right route for every learner

Roadmap is practical and communicative, and gets students talking with topics and tasks relevant to their world. Each lesson is written around a communicative goal, and builds the language and skills to achieve it.

The unique twin-track approach allows you to adapt the material to your learners' needs and teach the language and skills they need to progress: in the fast-track route, every class covers essential language and speaking skills, while the extended route adds in-depth skills training in reading, writing and listening.

Comprehensive teacher support makes lessons easy to organize and fun to teach, however much time you have to prepare.

"As every teacher knows, no two classes are the same."

Flexibility to meet different learners' needs

As every teacher knows, no two classes are the same. Different learners have different needs, different learning preferences, and different strengths and weaknesses. Instead of a one-size-fits-all approach to teaching, *Roadmap* has the flexibility to cater to many different sizes and shapes of class, to meet all your learners' needs.

With its dual-track approach, *Roadmap* has a series of core lessons with a GSE-based communicative goal to work towards in each one. It also provides in-depth skills lessons aimed at practising reading, writing and listening, and developing those skills, teaching learners strategies that they can use outside the classroom. So whether you're teaching a short course over the summer or a comprehensive course of study (or anything in between), *Roadmap* has the flexibility to provide everything you need.

There are eight levels taking students from A1 to C1-C2. This means that you are able to match the level of material to the level of your students more precisely, and learners are less likely to repeat levels. There are fresh new materials and topics in each lesson (rather than each unit), which helps keep learners - and teachers - engaged, and avoid 'topic fatigue'.

So whatever your students' needs, *Roadmap* has the flexibility to provide the right route for every learner at every stage of their journey.

"Students... feel better prepared for dealing with the real world."

Why challenge is good for building language

Speakout uses authentic material that engages and supports students, and helps build their confidence in their ability to deal with real spoken English. Learning a language is difficult, particularly understanding fast spoken English, and this is one of *Speakout's* strengths.

Both teachers and students appreciate the challenge of using the authentic video, audio and texts, with students saying that they feel better prepared for dealing with the real world than they would if they only had exposure to graded material. At the same time, within a level and a unit we vary the difficulty of texts so that some are easily accessible to students at that level.

Speakout's main focus is to get students talking, and teachers who use *Speakout* comment that their students talk a lot during lessons because the course covers topics that they genuinely want to discuss, and gives them all the language they need to express their own ideas and opinions.

"Good language learners... take chances, make mistakes and become masters of their own learning."

Four Ways to Help Students Take Risks

Good language learners take risks. They may be uncertain if they're speaking or writing correctly, but they take chances, make mistakes and become masters of their own learning. It's a process of trying and failing and trying again and again.

How we teach and the materials we use have a great impact on whether students are comfortable taking risks. Understanding this and other parts of the learning process is the basis of *StartUp*. Here are four ways *StartUp* helps students feel secure enough to take risks in their language learning.

- A sense of security begins with the Welcome Unit, where step-by-step instructions explain how to get the most out of the student books and online resources.
- StartUp* builds communities of learners through pair and group tasks on almost every page, as well as the grammar, listening, pronunciation, speaking, and vocabulary skills that lay the foundation for better communication.
- Once students feel comfortable with a lesson's key language, they engage in open-ended and personalized tasks. These tasks help students build confidence through sharing ideas, not just memorizing facts.
- Outside class, students use the *StartUp* mobile app to preview and review lessons, listening to audio, watching videos, and checking their comprehension with self-tests.

StartUp encourages risk-taking, helping students become confident on their paths to successful language learning.

"English is a life skill for people all over the world."

Observe, practice, and remember

The English language classroom needs to serve as a place students can observe, practice, and remember new language. In other words, it has to provide a mini-microcosm of the English-speaking world and concentrate exposure and practice at a language level appropriate for students.

Our goal in creating *Top Notch* and *Summit* was to make English unforgettable by providing multiple opportunities to observe new language, plenty of receptive and productive practice, and deliberate and systematic recycling of that language long after its initial presentation.

We are told by teachers that what they love about the course is the naturalness and authenticity of the language used, and the emphasis we've put on social language and the idioms of everyday speech. English today is not an academic subject, as it was years ago where students would prepare mainly to read and write it, with grammar the most important focus. Today, English is a life skill for people all over the world, who use it as a lingua franca to function in business, study, and travel.

"For many learners, their motivation starts to suffer when they reach the intermediate plateau."

The challenge of teaching advanced learners

Once your business English students reach a B2 level of English, they're fairly competent communicators. For many learners, their motivation to improve starts to suffer when they reach this intermediate plateau. They understand almost everything and can express themselves clearly enough – so why would they want to continue and achieve a C1 level of English? And how can we help them see the benefits in their own lives and careers?

Nurture students' motivation to reach new heights. They need a high degree of intrinsic motivation. If they can enjoy the challenge of developing new skills and feel satisfaction at watching a favourite TV show in its original version, there is no turning back. As for extrinsic motivation, having a superior level of English offers them a competitive edge in the international job market, opens up career or promotion opportunities, and gives them greater self-confidence in their abilities in the workplace.

There are many other way to help your students too: get them to set goals for themselves and review the goals regularly; encourage incidental learning; broaden their vocabulary range; make time for emergent language which may be langue students want in order to do their jobs; review and expand on core grammar areas; use 'real play' (rather than role play) to develop communication skills; develop business writing skills; and offer your students choices of what they should learn.

"Different week, same topic - admit it, it's not just the students who need a change."

Finding the formula for each lesson

You teach two, ninety-minute classes per week to a group of teenage Cambridge B2 First students. Last week, you started a new unit about jobs. On Monday, you did a reading lesson with some vocabulary. Then on Wednesday, you did a Use of English lesson focusing on key grammar structures. It's a new week and...

[Teacher] "OK everyone, please turn to page 24."

[Multiple students] "Ugh not jobs again..." *start speaking in their first language*

You're on the topic of jobs for the second week and before you even start the lesson, your students are already bored and tuning out. Does this sound familiar?

Different week, same topic - admit it, it's not just the students who need a change. Instead of having one unit, one topic, why don't we choose a theme for each level and cover a variety of interesting topics? While the theme stays the same, the lesson focus changes, and there are lots of different, interesting ideas. The unique topics and the central overarching theme holding everything together spark student and teacher curiosity and help build momentum.

All the usual exam topics are covered and not just in one isolated unit. That way, you don't ever finish a topic, as you come back to it from different angles throughout the course. This helps reinforce learning.

Gold New Edition

Successful exam classes are built on trusted instruction

Gold is the world's most popular exam preparation course for the Cambridge English Qualifications.

The new edition follows the same trusted approach and has been brought right up to date with new digital resources, fresh content and stimulating, discussion-rich lessons with lots of opportunities for personalisation.

A strong emphasis on communicative practice and the development of natural speaking skills builds students' confidence as they face their exams.

Designed to get great results in general language competence as well as in Cambridge English Qualifications, Gold is the perfect choice both for test takers and for non-exam students who want real progress in their English through a purposeful syllabus.

"When the focus becomes too much about the exam, the real reason why students are learning English can be forgotten."

Find a balance during your exam course and meet the needs of all your students

Helping students to prepare for an exam can be extremely rewarding. There's a clear aim that everyone is working towards. We, and our students, can see the progress they make and at the end of the course we feel great when our students do well.

However, these days, not everyone on a course plans to take an exam at the end of it. So, how can we deal with this situation?

The most effective thing we can do is plan lessons based around sub-skills and not around test tasks. Backwash describes the effect that exam teaching has on classroom activities.

When the focus becomes too much about the exam, the real reason why students are learning English can be forgotten, producing negative backwash. Being able to underline key words in multiple choice questions and discern between distractors in a listening exam are really useful exam skills, but they don't help learners to communicate in the real world.

"Online classes have a different dynamic from face-to-face lessons in a classroom."

Engage teens online with Gold Experience

With more teaching now online, you may be comfortable with the practical aspects of distance teaching, but you may still face challenges around keeping your teenage students engaged – especially when it comes to exam preparation. These tips can help you overcome that challenge.

Follow the ESAP framework

The ESAP framework is designed to support you with remote learning. It can be used for all types of online classes and it is a great way to make sure that your exam preparation classes are fun and engaging for learners. ESAP stands for: Engage, Study, Activate, Practise.

Make the most of your online teaching tools

When it comes to keeping students engaged, it's important to use every online tool you have at your disposal to keep your classes dynamic and interesting: share your screen; make the most of the interactive whiteboard and the tools that come with it; use a chat box to elicit answers, get students writing, brainstorm ideas etc; and get learners to practise speaking in breakout rooms.

Boost student engagement

There's no denying that online classes have a different dynamic from face-to-face lessons in a classroom. However, you can use to boost engagement and keep motivation high. Develop trust with your students by creating online class norms. Build connections while lessons are starting. Keep up the pace throughout a lesson so there is less opportunity for distraction and encourage students to let you know when they've finished so you can give them extra activities to do. And ask for feedback on how they feel the course is going.

Let's focus on skills for success

Language learning is not a 'one size fits all' process. Learners have different strengths and weaknesses, and different goals. Pearson's skills titles have been created so that teachers and learners can be confident they are focusing on the right skills at the right level.

Take a look

Mastering academic English is the single highest determinant of academic success in a university program. Take a look at how students can achieve this, by developing critical thinking skills while building their linguistic skills.

University Success

Prepare for academic success

University Success is a complete five-level course from Beginning to Transition across different strands. Lower levels support beginning students by providing the scaffolding to construct a strong linguistic core and prepare students for the complexity and challenge of the upper levels.

For further information, see page [128].

"Give students the academic skills to give them the confidence to participate fully in English-speaking courses."

Bridging the gap

Studying abroad in an English-speaking country can be a daunting prospect for many students while also a fantastic opportunity for students to use their language skills in real-world situations and give their confidence a boost. But how can we help prepare them for success, so that they can really benefit from their experience abroad?

One way to do this is to develop their academic skills alongside their language skills. Academic skills encourage students to become more efficient learners. They give students the confidence to participate fully in English-speaking courses and are invaluable outside of the classroom and after they graduate. These skills, which include critical thinking and note-taking, are also highly transferable, and therefore vital for success in any career.

The skills students are expected to have when they start in higher education can be organized into five main categories:

- **Academic Discourse** – skills communicating effectively in debates, discussions and presentations
- **Academic Text Strategies** – skills for analyzing academic texts in greater detail
- **Academic Strategies** – skills for understanding and responding critically to lectures
- **Composition** – skills for effective academic writing
- **Comprehension** – skills for understanding academic texts and lectures

University Success helps build these skills through its three strands: reading, writing, and oral communication skills, which are developed through studying a variety of authentic academic content; the sorts of lectures and texts they could expect to come across in their further studies.

Robyn Brinks Lockwood, Lawrence Zwier, Maggie Sokolik

"The adult brain is a pattern-seeking organ. Learners are continually looking for patterns to make learning easier."

The cognitive science behind the Azar-Hagen Grammar series

Exciting new research in cognitive science shows how people actually learn. Brain scans and other technology reveal what is happening inside the brain, and this research informed elements of the 5th edition:

- The adult brain is a pattern-seeking organ. Learners are continually looking for patterns to make learning easier. The *Azar-Hagen Grammar series* helps students see patterns in both the charts and the exercises.
- Practice over time, or spaced practice, is more effective than massed practice, or learning something in a single session. In general, the exercises are shorter, there are more of them, and review is extended over multiple chapters.
- When students are more engaged, their cognitive performance is better. Practical content and life-skills are behind varied and high-interest activities.
- There are capacity limits to our working memory, and students benefit if we can reduce the cognitive load. Our grammar charts introduce less information at one time, and rather than one long exercise, practice is in smaller chunks.
- Repetition causes new connections to be formed in the brain, thereby helping students retain information. Numerous activities encourage repetition in a variety of ways.
- Taking a test before learning new information can lead to stronger memory of that information. This applies even if you fail the test - if you get every single item wrong. All chapters begin with a pre-test.

“Responsibility for learning is shifting from the teacher to the learner.”

More and more programs teach grammar communicatively.

Teachers who use this approach introduce a grammar structure in a natural, meaningful reading. Then they present and practice the structure in context and end up by setting up authentic-like situations in which students interact meaningfully while incorporating the new grammar point.

The role of the grammar teacher has gone beyond that of a transmitter of information about the target structure and arbiter of what is right and wrong in discrete sentences. Instead, the communicative grammar teacher introduces interesting, often content-based themes, and assigns thoughtful tasks. She or he coordinates team, group, and class work, manages classes in which students are doing different tasks, and becomes a resource person who provides students with the best access to the best material online and offline. In addition, the teacher facilitates activities to make sure that all goes smoothly. Grammar is taught through an integrated skills approach—listening, speaking, reading, and writing are all a part of the grammar class.

Responsibility for learning is shifting from the teacher to the learner. Motivation is generally higher, and results are better.

"Reading together provides children with a model of proficient reading, enabling them to see and hear language in an enjoyable, relaxed context."

Why should we encourage students to develop a reading habit?

It's important that we get kids to read widely and often, as soon as possible, so that they develop a life-long love of reading.

There is plenty of research around the importance of reading for pleasure. According to the OECD, 'Reading enjoyment has been reported as more important for children's educational success than their family's socio-economic status'.

It's not surprising that children who read daily do better on school tests. Regular and better reading leads to better writing, better comprehension, and a wider vocabulary.

Children who read regularly have a greater confidence in reading and are more likely to enjoy it. Being an avid reader is linked to having broader general knowledge, a better understanding of other cultures, and a greater likelihood of community participation. They also display a better understanding of human nature and show improved decision-making skills.

Ideally, teachers and parents should work together to foster a love of reading in children so they enjoy the long-term benefits that reading regularly provides - an enriched life filled with options and opportunities.

NO COPYING, SINGLE OR MULTIPLE, OF RECORDINGS IS PERMITTED.

The law allows for a reader to make a single copy of part of a book for purposes of private study. It does not allow the copying of entire books or the making of multiple copies of extracts.

Under no circumstances may schools photocopy materials for use in self-access centers, unless they have registered with CLA or an associated licensing agency and allow/use photocopying strictly in accordance with their regulations. If a school wishes to have multiple copies of a part of a book in a self-access center, then it must purchase the necessary number of printed books. There is no formal objection to schools physically cutting printed texts into parts and reassembling them in a way that seems appropriate, providing the books or parts of books are not then resold. It is not, however, a practice we would recommend.

In the case of audio recordings, it is permissible for a school to make a copy of an audio CD or file, keeping the original as a back-up. Only one copy may exist at any one time. As an example, a school may copy different parts of an original audio recording onto several CDs, providing that no part of the original exists in more than one copy at any one time. Therefore, if a school wishes to have three copies of one part of an audio recording, it must have three originals.

All the information contained in this catalog is correct at the time of going to press (November 2019) and is subject to change without prior notice.

Where no CD-ROM specifications are given, please contact your local Pearson office.
