

Fantastic Journeys

Lalie Harcourt and Ricki Wortzman

Pearson

Monarch Butterflies

A tagged monarch butterfly flew about 160 kilometres in 1 day.

See page **4**.

African Elephants

African elephants migrate to find food. An adult elephant can eat up to 135 kilograms of food in 1 day.

See page **8**.

Red Crabs

The bodies of baby red crabs are only about 5 millimetres across when they migrate. (The red line under the crab is 5 millimetres long.)

See page **12**.

All over the world, animals go on journeys called *migrations*. Some animals migrate to find food and water. Others migrate to breed or find warmer weather.

Caribou

Hundreds of thousands of caribou migrate every year.

See page **16**.

Arctic Terns

These birds migrate as far as 90 000 kilometres per year.

See page **20**.

Where is everyone going?
I'd better try to catch up!

Animals migrate by walking over land, swimming through oceans, or flying high in the sky. What makes some of these migrations amazing?
