

Earth is the only planet known to support life of animals, plants and humans.

Earth in Space

Every day on Earth you will notice things changing. You might notice things changing from night to day or from high tide to low tide. You might notice things changing from season to season. For thousands of years, people have wondered what causes these regular changes on Earth.

Scientists now know that these things are all caused by how Earth moves in space.

In this book, you will learn about Earth and how it moves through space. You will also learn about how the Sun and the Moon affect Earth.

The Sun and the Moon cause regular changes on Earth.
