

Contents

■ CHAPTER 1 Scientific investigation	XX
1.1 The nature of scientific investigations	XX
1.2 Planning investigations	XX
1.3 Data collection and quality	XX
1.4 Data analysis and presentation	XX
1.5 Evaluation and conclusion	XX
1.6 Reporting investigations	XX

Unit 1 How can the diversity of materials be explained?

■ AREA OF STUDY 1

How do the chemical structures of materials explain their properties and reactions?

■ CHAPTER 2 Elements and the periodic table	XX
2.1 The atomic world	XX
2.2 Emission spectra and the Bohr model	XX
2.3 The Schrödinger model of the atom	XX
2.4 The periodic table	XX
2.5 Trends in the periodic table	XX
Chapter 2 Review	XX
■ CHAPTER 3 Covalent substances	XX
3.1 Covalent bonding model	XX
3.2 Shapes of molecules	XX
3.3 Polarity in molecules	XX
3.4 Intermolecular forces	XX
3.5 Covalent lattices	XX
Chapter 3 Review	XX
■ CHAPTER 4 Metals	XX
4.1 Metallic properties and bonding	XX
4.2 Reactivity of metals	XX
4.3 Producing and recycling metals	XX
Chapter 4 Review	XX
■ CHAPTER 5 Ionic compounds	XX
5.1 Properties of ionic compounds	XX
5.2 Formation of ionic compounds	XX
5.3 Precipitation reactions	XX
Chapter 5 Review	XX
■ CHAPTER 6 Separation and identification of components of mixtures	XX
6.1 How substances dissolve	XX
6.2 Principles of chromatography	XX
Chapter 6 Review	XX
Area of Study 1 • Review questions	XX

■ AREA OF STUDY 2

How are materials quantified and classified?

■ CHAPTER 7 Quantifying atoms and compounds	XX
7.1 Relative mass	XX
7.2 Avogadro's constant	XX
7.3 Molar mass	XX
7.4 Percentage composition, empirical and molecular formulas	XX
Chapter 7 Review	XX
■ CHAPTER 8 Organic compounds	XX
8.1 Organic materials	XX
8.2 Hydrocarbons	XX
8.3 Haloalkanes	XX
8.4 Alcohols and carboxylic acids	XX
Chapter 8 Review	XX
■ CHAPTER 9 Polymers and society	XX
9.1 Polymer formation	XX
9.2 Thermoplastic and thermosetting polymers	XX
9.3 Designing polymers for a purpose	XX
9.4 Recycling plastics	XX
9.5 Innovations in polymer manufacture	XX
Chapter 9 Review	XX
Area of Study 2 • Review questions	XX

AREA OF STUDY 3

Heinemann Chemistry 1 6th edition includes a comprehensive set of resources to support Area of Study 3 via your Pearson Places bookshelf.

Unit 2 How do chemical reactions shape the natural world?

■ AREA OF STUDY 1

How do chemicals interact with water?

■ CHAPTER 10 Water as a unique chemical	XX
10.1 Essential water	XX
10.2 Heat capacity	XX
10.3 Latent heat	XX
Chapter 10 Review	XX
■ CHAPTER 11 Acid–base reactions	XX
11.1 Acids and bases	XX
11.2 Strength of acids and bases	XX
11.3 Reactions of acids and bases	XX
11.4 pH: a measure of acidity	XX
11.5 Measuring pH	XX

11.6 Acid–base reactions in the environment	XX
Chapter 11 Review	XX
■ CHAPTER 12 Redox reactions	XX
12.1 Introducing redox reactions	XX
12.2 Metal displacement reactions	XX
12.3 Redox reactions in society	XX
Chapter 12 Review	XX

Area of Study 1 • Review questions **XX**

■ AREA OF STUDY 2

How are chemicals measured and analysed?

■ CHAPTER 13 Measuring solubility and concentration	XX
13.1 Measuring solubility	XX
13.2 Calculating concentration	XX
Chapter 13 Review	XX
■ CHAPTER 14 Analysis for acids and bases	XX
14.1 Principles of volumetric analysis	XX
14.2 Stoichiometry	XX
Chapter 14 Review	XX
■ CHAPTER 15 Measuring gases	XX
15.1 Greenhouse gases	XX
15.2 Introducing properties of gases	XX
15.3 Calculations involving gases	XX
Chapter 15 Review	XX
■ CHAPTER 16 Analysis for salts	XX
16.1 Testing for salts in water	XX
16.2 Quantitative analysis of salts	XX
16.3 Instrumental analysis for salts	XX
Chapter 16 Review	XX

Area of Study 2 • Review questions **XX**

AREA OF STUDY 3

Heinemann Chemistry 1 6th edition includes a comprehensive set of resources to support Area of Study 3 via your Pearson Places bookshelf.

APPENDIX	XX
GLOSSARY	XX
