

Living or non-living?

Our world is an amazing place filled with raging rivers and mighty mountains. It is a world of weird animals and wacky plants, towering skyscrapers and super-fast spacecraft. No wonder we say 'Wow!' at something every day.

Almost as amazing as the world itself is that every single thing in it fits into just two groups: living or non-living. Now that really is something to go 'Wow!' about!

This amazing insect looks just like a leaf.

LET'S FIND OUT

- What do living things have in common?
- How different are living things from each other?
- What is **extinction**?
- How can we learn about living things that no longer exist?
- Why are living things still facing extinction?

Living and non-living – the difference is huge ...
