

Contents

■ CHAPTER 1 Scientific investigation	1
1.1 The nature of scientific investigations	4
1.2 Planning investigations	9
1.3 Data collection and quality	22
1.4 Data analysis and presentation	34
1.5 Evaluation and conclusion	46
1.6 Reporting investigations	51

Unit 3 How can design and innovation help to optimise chemical processes?

■ AREA OF STUDY 1

What are the current and future options for supplying energy?

■ CHAPTER 2 Carbon-based fuels	63
2.1 Exothermic and endothermic reactions	64
2.2 Types of fuels	68
2.3 Fuel sources for the body	78
2.4 Bioethanol	83
2.5 Energy from the combustion of fuels	89
Chapter 2 Review	99
■ CHAPTER 3 Obtaining energy from fuels	103
3.1 Stoichiometry involving combustion of fuels	104
3.2 Determination of limiting reactants or reagents	116
3.3 Calculating heat energy released	121
3.4 Solution calorimetry	129
3.5 Energy from fuels and food	137
Chapter 3 Review	145
■ CHAPTER 4 Redox reactions	149
4.1 Oxidation and reduction	150
4.2 Oxidation numbers	156
4.3 Writing complex redox equations	164
Chapter 4 Review	174
■ CHAPTER 5 Galvanic cells and fuel cells as sources of energy	177
5.1 Galvanic cells	178
5.2 The electrochemical series	187
5.3 Fuel cells	196
5.4 Supplying energy sustainably	202
Chapter 5 Review	209

Area of Study 1 • Review questions	214
------------------------------------	-----

■ AREA OF STUDY 2

How can the rate and yield of chemical reactions be optimised?

■ CHAPTER 6 Rates of chemical reactions	219
6.1 Rate of reaction and collision theory	220
6.2 Effect of changes of conditions on rate of reaction	227
6.3 Catalysts	232
Chapter 6 Review	236
■ CHAPTER 7 Extent of chemical reactions	241
7.1 Dynamic equilibrium	242
7.2 The equilibrium law	251
7.3 Calculations involving equilibrium	255
7.4 Le Châtelier's principle	262
Chapter 7 Review	273
■ CHAPTER 8 Production of chemicals by electrolysis	277
8.1 Electrolytic cells	278
8.2 Commercial electrolytic cells	285
8.3 Faraday's laws	291
Chapter 8 Review	298
■ CHAPTER 9 Designing for energy efficiency and sustainability	303
9.1 Optimising the yield of industrial processes	304
9.2 Rechargeable cells and batteries	309
9.3 Producing 'green' hydrogen gas	315
Chapter 9 Review	323
Area of Study 2 • Review questions	326

AREA OF STUDY 3

Heinemann Chemistry 2 6th edition includes a comprehensive set of resources to support Area of Study 3 via your Pearson Places bookshelf.

Unit 4 How are carbon-based compounds designed for purpose?

■ AREA OF STUDY 1

How are organic compounds categorised and synthesised?

■ CHAPTER 10 Structure, nomenclature and properties of organic compounds	335
10.1 Diversity of organic compounds	336
10.2 Hydrocarbons	343
10.3 Haloalkanes, alcohols and amines	352
10.4 Molecules containing a carbonyl group	359
10.5 An overview of IUPAC nomenclature	367
10.6 Trends in physical properties within homologous series	374
Chapter 10 Review	383

■ CHAPTER 11 Reactions of organic compounds	387
11.1 Reactions of alkanes and haloalkanes	388
11.2 Reactions of alkenes	392
11.3 Reactions of alcohols, carboxylic acids and esters	396
11.4 Reaction pathways and atom economy	406
11.5 Sustainable production of chemicals	418
Chapter 11 Review	426
■ CHAPTER 12 Reactions of biologically important compounds	431
12.1 Synthesis of proteins	432
12.2 Synthesis of starch, glycogen and lipids	442
12.3 Hydrolysis of biomolecules	451
Chapter 12 Review	460
Area of Study 1 • Review questions	463
<hr/>	
■ AREA OF STUDY 2	
How are organic compounds analysed and used?	
■ CHAPTER 13 Laboratory analysis of organic compounds	469
13.1 Qualitative testing of organic compounds	470
13.2 Redox titrations of organic compounds	481
Chapter 13 Review	496
■ CHAPTER 14 Instrumental analysis of organic compounds	499
14.1 Mass spectrometry	500
14.2 Infrared spectroscopy	507
14.3 Nuclear magnetic resonance spectroscopy	518
14.4 High-performance liquid chromatography	530
14.5 Determination of molecular structure by spectroscopy	537
Chapter 14 Review	549
■ CHAPTER 15 Medicinal chemistry	555
15.1 Medicinal ingredients from plants	556
15.2 Proteins	563
15.3 Enzymes	572
15.4 Optical isomers and inhibition of enzymes	578
Chapter 15 Review	587
Area of Study 2 • Review questions	590
<hr/>	
■ AREA OF STUDY 3	
<i>Heinemann Chemistry 2 6th edition includes a comprehensive set of resources to support Area of Study 3 via your Pearson Places bookshelf.</i>
